

# Timber Windows & Doors

# Timber windows and doors

Whether you are building a new home, renovating, or adding an extension, your choice of windows and doors will have a significant impact on the look of your home. Stegbar's cedar windows and doors provide you with a timeless design that is functional and attractive.

Whether they are stained to bring out the warm earthy tones, or painted to suit your decor and style, timber windows and doors will match or complement most architectural styles from traditional Federation and Colonial, to modern contemporary designs.

Stegbar uses only western red cedar, as not only is it a beautiful timber with a remarkably fine and stable grain structure, it will not warp or twist, ensuring years of reliable operation from your windows and doors.

For over 50 years Stegbar has been manufacturing quality timber windows and doors that are the perfect solution to your design needs.

## Plan before you buy

Whether you're building or renovating, choosing the right windows and doors for your home is as important as choosing the architectural style itself. Usually covering more than half the surface area of the average house, the right window and door choice can make a home inviting from the outside, appear more spacious from the inside, enhance the architectural style and increase the value of the house.

There are many issues to consider before you can choose the right window or door for your home.

Apart from how it looks, there are the practicalities – location, how it opens, how much ventilation you want, and most importantly whether the product you buy is suitable for its intended purpose.

As you will probably only buy windows and doors once or twice in your lifetime, it is a decision that you should consider carefully.

At Stegbar we have built a reputation based on innovative design, unsurpassed craftsmanship, leading edge technology, and uncompromising customer service.

Our professionally trained sales consultants will help you find the perfect solution for your home.

## Stegbar cedar range

Western red cedar is a unique timber material for windows and doors, as it is a hard wearing softwood. It is not subject to warping or twisting, so you can be sure that you will have years of reliable, trouble free operation from your Stegbar cedar windows and doors.

It is also a beautiful timber that is dimensionally stable under almost any climatic condition. Its fine grain characteristics minimise shrinkage and swelling, therefore prolonging the life of surface finishes.

The colour variation of the grain is cedar's most distinguishing feature and makes it highly sought after as a material for feature joinery. Ranging in colour from honey/beige to deep reds and browns, it is the mix of colours within a single piece of cedar that makes it unique.

Cedar has built-in natural preservatives that provide resistance to borers, termites, rot and fungus growth. Its lack of pitch and gum veins allows cedar to readily accept semi-clear and clear finishes, which will accentuate its natural colour variations.

Supplied either raw to be stained or varnished, or preprimed ready for painting, the Stegbar cedar window and door range can be finished to meet your design and decorator needs.

## Stegbar quality guarantee

All Stegbar products are covered by a straightforward, easy to understand guarantee that reflects the confidence with which Stegbar recommends our products to you.

Every Stegbar product has a specific guarantee that covers workmanship, performance and durability. Most Stegbar products are guaranteed for up to seven years.

And incidentally, isn't it comforting to realise that with over 50 years of success in the building industry, Stegbar will certainly be around to offer guaranteed service, spare parts and advice should you ever need it.

## Bushfire rated range

Living in the Australian bush offers a lifestyle beyond compare. But the threat of bushfires is never far from your doorstep and needs to be considered when building or renovating in such an idyllic setting.

Australian homes need innovative windows and doors to brave our harsh environment, to help control temperature and light and to look good inside and out.

With this in mind, Stegbar has developed – and extensively tested – a range of aluminium and cedar windows and doors that meet BAL 40 certification, giving you peace of mind against the threat of bushfires. The range eliminates the need for bulky shutters, fire curtains or screens on fixed glazing.

For more information refer to the Stegbar Bushfire brochure available at [stegbar.com.au](http://stegbar.com.au)

## Built to last: engineered solid cedar

Stegbar is recognised as one of Australia's leading manufacturers of highly crafted doors, guaranteeing built-in quality and durability every time.

We use environmentally friendly methods and materials in the construction of our cedar doors. Commonly referred to as engineered timber components, this form is today world recognised as providing superior stability and structural reliability, while maintaining the warmth and visual appeal of natural solid cedar.

Engineered solid cedar is created by utilising the offcuts generated in timber manufacturing. These offcuts are finger jointed together to form long lengths. This piece of finger jointed timber is then laminated with cedar veneer to create a visually pleasing component.

Stegbar is committed to providing the most suitable components in all our products. We use engineered timber in the vertical stiles of our cedar doors because of the additional structural integrity that it adds to the door. Engineered solid cedar can be cut, shaped, planed, sanded, painted, stained or varnished as easily as natural solid cedar.

*Finger jointed*

*Laminated and veneered*

## Did you know that Stegbar...

- Is over 50 years old and famous for design innovation and quality?
- Has an excellent reputation in the building industry and is the name most usually specified by architects and builders for Australia's most prestigious homes and apartment buildings?
- Has product display centres all around the country, where you can see all the options and talk to our fully qualified consultants before you buy?
- Has our own highly trained and qualified tradesmen who are specialists in the installation of doors, windows, showerscreens and wardrobes?
- Ensures that all our products meet or exceed Australian Standards?
- Has a tested and certified range of cedar windows and doors suitable for use in bushfire BAL rated areas?

# Window styles

A window consists of an outer frame that goes in the opening in the wall, and a sash frame that holds the glass. The style of the window refers to how the sash operates or opens within the outer frame.

There are four traditional styles of windows – double hung, awning, casement, and sliding. The one that is most appropriate for you can depend on a number of factors and which are most important to you:

- How you operate the window – manually slide them up or down, or mechanically wind them out
- How much ventilation they allow in
- Can they be opened during inclement weather without bringing it inside
- What room they are being used in
- Which one looks best on the outside when opened
- The amount of wall space available for the window and its location.

## Glossary

**Bars (glazing bars)** – thin strips separating the panes of glass in a sash.

**Bay window** – generally composed of three individual windows with the side units at 45° or 90° angles to the wall.

**Chair rail** – a fixed horizontal member located at chair height, used to protect and separate upper and lower glazing in windows.

**Float glass** – standard clear glass.

**Frame** – the top, sides and bottom that form an opening for the window or door.

**Glazing bead** – a timber strip applied to the sash around the perimeter of the glass to hold the glass in place.

**Head** – the top of the outer frame.

**Insulated glass unit** – glazing which incorporates two panels of glass separated and sealed by an air space for the purpose of sound and/or thermal insulation.

**Jamb**s – the sides of the outer frame.

**Laminated glass** – a panel of glass usually consisting of two individual panels of glass bonded together with a flexible plastic interlayer.

# Window styles

*Double hung windows* have two vertically sliding sashes which slide past each other in a single frame.

*Single hung windows* have one fixed and one opening sash.

*Sliding windows* have two or more sashes, which slide past each other horizontally within the frame.

*Awning windows* are hinged along the top horizontal edge and the bottom opens outwards.

*Casement windows* are hinged along a vertical edge and open outwards from the opposite side.

# Glossary

**Light/Lite** – a window or other construction which allows light into a room. Also denotes the sections into which a sash is subdivided by glazing bars.

**Mullion** – the vertical divisions, or joints, between single windows in a multiple window unit.

**Picture window** – a large non-operating window designed for maximum view without obstruction.

**Rails** – the top and bottom of the sash.

**Sash** – the inner frame that holds the glass.

**Sidelite** – tall, narrow, fixed or operating sash on either or both sides of a door.

**Sill** – the bottom of the outer frame.

**Stiles** – the sides of the sash.

**Toughened glass** – a glass which has been treated so that it is up to five times stronger than ordinary float glass.

**Transom** – a horizontal framing member between a window or door and an upper light (normally a fixed window).

**Weep hole** – a small hole or slot which is designed to drain water from a horizontal member.

## Tilt double hung windows

The cedar tilt double hung window is a Stegbar innovation designed to provide you with the timeless character of the double hung window combined with a unique tilting sash to allow easy cleaning. Both sashes can also be completely removed to make painting and maintenance a breeze.

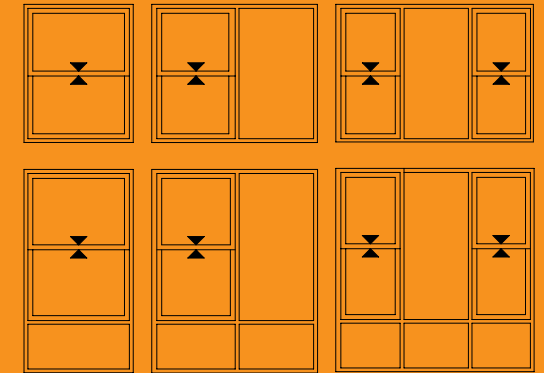

The classic style of a cedar tilt double hung window makes it ideal for both traditional and contemporary homes, while also providing the ultimate in ventilation control, allowing you to direct air through the top, bottom, or both sashes together.

Featuring a recessed spring balance system and aluminium tracks, the cedar tilt double hung window will provide a lifetime of smooth and rattle free operation. A cam catch to provide better weather protection and security is a standard feature of the Stegbar cedar tilt double hung window.

## Standard window configurations

### *Standard features*

- Spring balance system
- Keyed lock for added security
- Cam catch provides pressure clamping
- Tilt in sashes for easy cleaning and painting
- Aluminium jambs eliminate rattle
- Sashes sealed at head and sill

### *Options*

- A range of glass solutions available
- External timber or aluminium insect screens
- Plain glass or various glazing bar designs
- Colour matched hardware and jambs
- A variety of window style configurations

## Single and double hung windows

The timeless character of the double hung window has made it one of the most popular window choices available. Ideal for both traditional and contemporary homes, the Stegbar cedar double hung window provides the ultimate in ventilation control, allowing you to direct air through the top, bottom, or both sashes together.

Featuring a concealed spring block and tackle balance system, the cedar double hung window will provide a lifetime of smooth and rattle free operation. A cam catch to provide better weather protection and security is a standard feature.

The cedar double hung window is also available as a single hung window – one fixed sash and another sash that slides up and down.

The all timber look of the Stegbar cedar double hung window makes it an excellent replacement for old spiral balance or cord and weight windows.

## Standard window configurations

### *Standard features*

- Concealed spring pulley system
- Keyed lock for added security
- Cam catch provides pressure clamping
- Sash lifts fitted to bottom sash
- Sashes can be removed and replaced easily

### *Options*

- A range of glass solutions available
- External timber or aluminium insect screens
- Single or double hung sashes
- Plain glass or various glazing bar designs
- Colour matched hardware
- A variety of window style configurations

## Awning windows

Stegbar cedar awning windows use a slimline profile for the frame to create a contemporary design that will blend with most architectural styles.

Often chosen because of their functional design, awning windows are ideal in situations where furniture or kitchen benches prevent easy access to the window. The unique chain winder allows easy operation without interfering with insect or security screens.

Another feature of the awning window is that it can be left partly open during inclement weather to allow continuous ventilation, while at the same time not letting in any of nature's undesirable elements. The cedar awning window is the perfect style to let you take in the views while allowing year round ventilation.

For a dramatic effect, the combination of fixed and operating sashes has the ability to provide a distinctive modern window wall.

## Standard window configurations

### *Standard features*

- Hook hinge to secure sash allows greater opening
- Key lockable winder for added security
- Chain winder has a folding handle to keep it clear of blinds
- Security plate fixing chain to sash
- Compression seals for water proofing

### *Options*

- For bushfire areas the range is available up to BAL 40
- A range of glass solutions available
- Internal timber or aluminium insect screens
- Plain glass or various glazing bar designs
- A variety of window style configurations

## Sliding windows

The Stegbar cedar sliding window is both functional and durable – the key criteria for any sliding window. The ultimate low maintenance style due to few moving parts, the sliding window can be adapted into many architectural designs.

The operating sash slides effortlessly on adjustable minimal friction nylon rollers, along an aluminium track, providing a smooth opening and closing action that requires little maintenance.

Ideal in locations where there is restricted space, cedar sliding windows can be your design statement in laundries, bathrooms and kitchens.

## Standard window configurations

### *Standard features*

- Keyed lock for added security
- Fully weather sealed around the complete frame perimeter
- Adjustable minimal friction nylon rollers
- Aluminium track system for smooth operation

### *Options*

- For bushfire areas the range is available up to BAL 40
- A range of glass solutions available
- Timber or aluminium insect screens
- Plain glass or various glazing bar designs
- A variety of window style configurations

## Casement windows

The Stegbar cedar casement window represents a classical era in window design. Created to allow more ventilation into your home, the casement window captures the essence and tradition of the past and is often the preferred choice for heritage restorations or additions to classic homes.

The great advantage of casement windows is their ability to maximise and control the breeze and direct it into any area of your home. This is achieved by their unique 90° pivot stays, which open in such a way as to partially centre the sash, thus capturing the breeze from any direction.

## Standard window configurations

### *Standard features*

- Cam latch provides pressure clamping
- Opens to 90° for maximum ventilation
- Winder operated for easy opening
- Sash compression seal ensures complete weather proofing

### *Options*

- For bushfire areas the range is available up to BAL 40
- A range of glass solutions available
- Internal timber or aluminium insect screens
- Plain glass or various glazing bar designs
- A variety of window style configurations

## Bi-fold windows

Traditionally, bi-fold windows have been a cut-down version of bi-fold doors – wide sash frames with bulky hinges and hardware. The Stegbar cedar bi-fold window solves these problems with narrower sash frames and dedicated hardware, so that either opened or closed you can still enjoy unobstructed panoramic views.

And to make the beautiful Stegbar cedar bi-fold window even more functional, it also comes with the option of a practical, integrated, roll down flyscreen to stop bugs and insects entering your home!<sup>1</sup> Concealed in the top section of the window frame, with the side vertical tracks built into the frame, the discreet flyscreen is hidden when not needed and easily opened when required.

The Stegbar bi-fold window promises you a lifetime of reliable and efficient service. From anodised aluminium componentry that provides superior corrosion resistance, to precision-ground stainless steel bearings that ensure effortless operation, a Stegbar bi-fold window is built to last.

Stegbar cedar bi-fold windows are available in a range of two, three and four leaf combinations from 600mm to 2500mm wide and from 500mm to 1500mm high. The two and four leaf bi-fold windows can be placed over a flat servery bench<sup>2</sup> that extends from inside to outside without a channel or guide.<sup>3</sup>

### Notes

1. The integrated flyscreen cannot be fitted to the window after manufacture.
2. Stegbar do not manufacture or supply the servery bench.
3. As with all flat servery applications, weather proofing of the opening must be provided by an extended overhang such as a veranda.

## Standard window configurations

### *Standard features*

- 66mm wide window sash
- Precision ground stainless steel bearings
- No visible aluminium sill track

### *Options*

- A range of glass solutions available
- Fully integrated roll-down flyscreen
- Left or right handed flyscreen operation
- Hardware colours: white, mahogany bronze, gold, satin chrome
- Plain glass or various glazing bar designs
- A variety of window style configurations

# Door styles

Stegbar cedar doors are available in either sliding, bi-fold or hinged styles. The one that is best for your home can depend on a number of factors and which are most important to you:

- How much ventilation they allow in
- What room they are being used in
- Which one looks the best on the outside
- The amount of wall space available for the door and its location.

*Bi-fold patio doors* have a series of between 2 to 7 doors, alternately hinged so they fold onto themselves.

*Sliding patio doors* have two or more panels which slide past each other horizontally within the frame.

*Hinged doors* are hinged on either the left or the right and can open either inwards or outwards.

## Glazing bars for windows and doors

*Colonial bars* divide the sash into a number of equal sized lites.

*Federation bars* form a perimeter edging on all four sides.

## Sliding patio doors

The Stegbar cedar sliding patio door allows you to invite nature inside, adding an extra dimension to your living area. The cedar sliding patio door has been designed to offer you space-saving versatility, while enjoying unobstructed views and years of reliable service.

A choice of either two, three or four door combinations ensures suitability for any variety of design applications. To provide an even wider opening this door is available in a stacking configuration where two doors slide across to stack on a third fixed door.\*

Our unique double deadlocking system incorporating a removable key snib provides you with the confidence of improved home security, while an anti-slam device will help protect your door.

The Stegbar sliding patio door is an ideal way to have easy access to the garden, terrace, patio or covered relaxation area, with clever and practical design.

\*Stacking doors are only available in a three or six door configuration. For further information contact your Stegbar sales representative.

## Standard door configurations

### *Standard features*

- Engineered timber door stiles for strength and stability
- Double keyed locks for added security
- Metal interlockers to increase door strength
- Fully weather sealed around the frame perimeter
- Aluminium track system for smooth operation
- A hardwood sill tread for minimal wear
- Large diameter heavy duty nylon rollers

### *Options*

- For bushfire areas the range is available up to BAL 40
- A range of glass solutions available
- Internal timber insect screens
- Plain glass or various glazing bar designs
- A family of colour matched hardware
- A variety of door style configurations

## Bi-fold patio doors

The Stegbar cedar bi-fold patio door makes a statement of both quality and elegance. Showcasing not only the warmth and beauty of this natural timber, but also its performance and stability, the cedar bi-fold door will be a focal point of your home.

While closed, the cedar bi-fold door allows an abundance of natural light into your home with easy accessibility through a single operating door. And when all the doors are open and folded away, the outside comes inside, providing fresh air and ventilation inside your home, and a clear unobstructed view.

Traditionally bi-folds have suffered from problems associated with the operating tracks and rollers wearing. Stegbar dual bogey roller system provides smooth and effortless operation, reliability guaranteed for years to come.

For total creative expression, our cedar bi-fold doors are unsurpassed. Select a door style from the cedar entry door range to match or complement the architecture of your home.

Note  
Frame height over 2350mm high requires use of a longer top lock for ease of opening and closing.

## Standard door configurations

### *Standard features*

- Engineered timber door stiles for strength and stability
- Hardwood sill provides long lasting wear resistance
- Head and sill tracks designed for smooth and quiet lifetime operation
- Sealed between doors and frame for complete weather protection
- Top hung dual bogey rollers

### *Options*

- A range of glass solutions available
- Plain glass or various glazing bar designs
- A family of colour matched hardware
- A variety of door style configurations

## Hinged patio doors

A gracious and distinctively designed door can create an enduring impression of your home.

With the extensive choice of matching doors in the exciting Stegbar cedar range, you can coordinate entry, internal and patio doors to give your home a traditional and elegant style.

A hinged patio door will not only provide a lifetime of reliability, but painted or stained, it will also make a statement of beauty.

Even without a door, a Stegbar cedar door frame will enhance the look of your home with the natural beauty and structural stability of the timber. Featuring a hardwood sill, they will prove durable and resilient for many years.

A feature of our door frame is its ability to be specified in either 'open-in' or 'open-out' form – you decide which is the most appropriate for your door.

Stegbar offers a range of doors for any area of your home. An internal bi-fold door can be the perfect solution to provide the flexibility of having a large open space or a closed off private retreat from the one room.

## Door types

### *Entry doors*

- Standard size:  
2040mm high × 820mm wide × 38mm thick
- Custom sizes:  
maximum height 2400mm\*  
maximum width 1020mm\*

### *Internal doors*

- Standard size:  
2040mm high × 820mm wide × 33mm thick
- Custom sizes:  
height 1970mm–2340mm\*

\*Depends on door style. Check with your Stegbar sales representative.

## Custom made windows and doors

Stegbar cedar custom made windows and doors are as individual as you are, hand crafted to your own designs and custom made to perfectly match your home's architectural style.

You can maximise your favourite views and create extra light, highlight your home's features, and add fascinating new dimensions by introducing curves and embellishments that turn an ordinary area into a distinctive centrepiece.

With the flexibility of cedar there are few limitations when considering custom made windows and doors.

Whichever style you choose, only Stegbar craftsmanship delivers traditional construction with modern features.

*Curved head*

*Sloping garden window*

*Diamond bar*

*90° bay window*

## *Door frames*

*Victorian*

*Sunray head*

## Design for windows and doors

Windows and doors will not only affect the look of your home from inside and outside, but where they are placed and the style you choose will also affect the comfort of you and your family.

The basic function of windows and doors is to admit daylight and ventilation in acceptable and consistent quantities, while maintaining the ambient temperature inside the house – this is your overall comfort level.

But this needs to be balanced against what you want to see through them and how much privacy you require. You should also consider how the windows and doors need to blend with the overall style of your home, both in design and colour. From a safety and security aspect you need to have the appropriate style of window or door for each location. And finally if noise is an issue you need to understand the impact of using certain styles of windows and doors.

Stegbar will help you find the best solution for your home to ensure a lifetime of comfortable living for you and your family.

# Stegbar Installation Service

Stegbar are here to help you our service doesn't end at providing you with product recommendation and technical advice our team of professional installers known as SIS – Stegbar Installation Service are here to make sure your new windows and doors are fitted to your home to the highest standard.
