

# Profilo Smart

Flexible, Modular, Customisable

Designed for your Care and Wellbeing®

 Year Warranty

Made in Italy

# The smart system designed to make the bathroom environment flexible.

The core of Profilo Smart is the unique track and cover system. This simple, clever and universal solution affords flexibility throughout the bathroom.

The track is an aluminium profile upon which you can attach, move, adjust and easily remove bathroom accessories.

## ***Flexible***

Accessories are easy to move and adjust: they adapt to the user's needs. Allowing the user to experience a superior level of comfort and autonomy.

## ***Modular***

Products can be added or removed from the track within minutes, allowing the bathroom to adapt to different users, situations and needs.

## ***Customisable***

A range of covers for the horizontal track have been designed to match every possible style of bathroom. It is possible to choose from an endless number of colours or sublimated images to hide the track and completely merge it into the environment's aesthetics.

# Customisable rail cover

## ***Designed to be integrated***

The cover can be customised so that it fully blends into the aesthetics of the environment maintaining a modern, stylish quality look and feel. The cover can also be replaced to meet any changes in the future of the environment offering unprecedented levels of comfort and safety.

Its versatility not only encompasses functionality but also aesthetics.

## ***Easy to Clean***

Due to the sleek profile of the cover design it ensures that its easy to clean, it hides and protects the mechanism from water and potential damage.

## ***Hides and Protects***

The cover profile is hinged on the track. It can be lifted to allow the attachment, removal or adjustment of the different accessories.

When the cover is closed, the cover hides the track and the attachments.

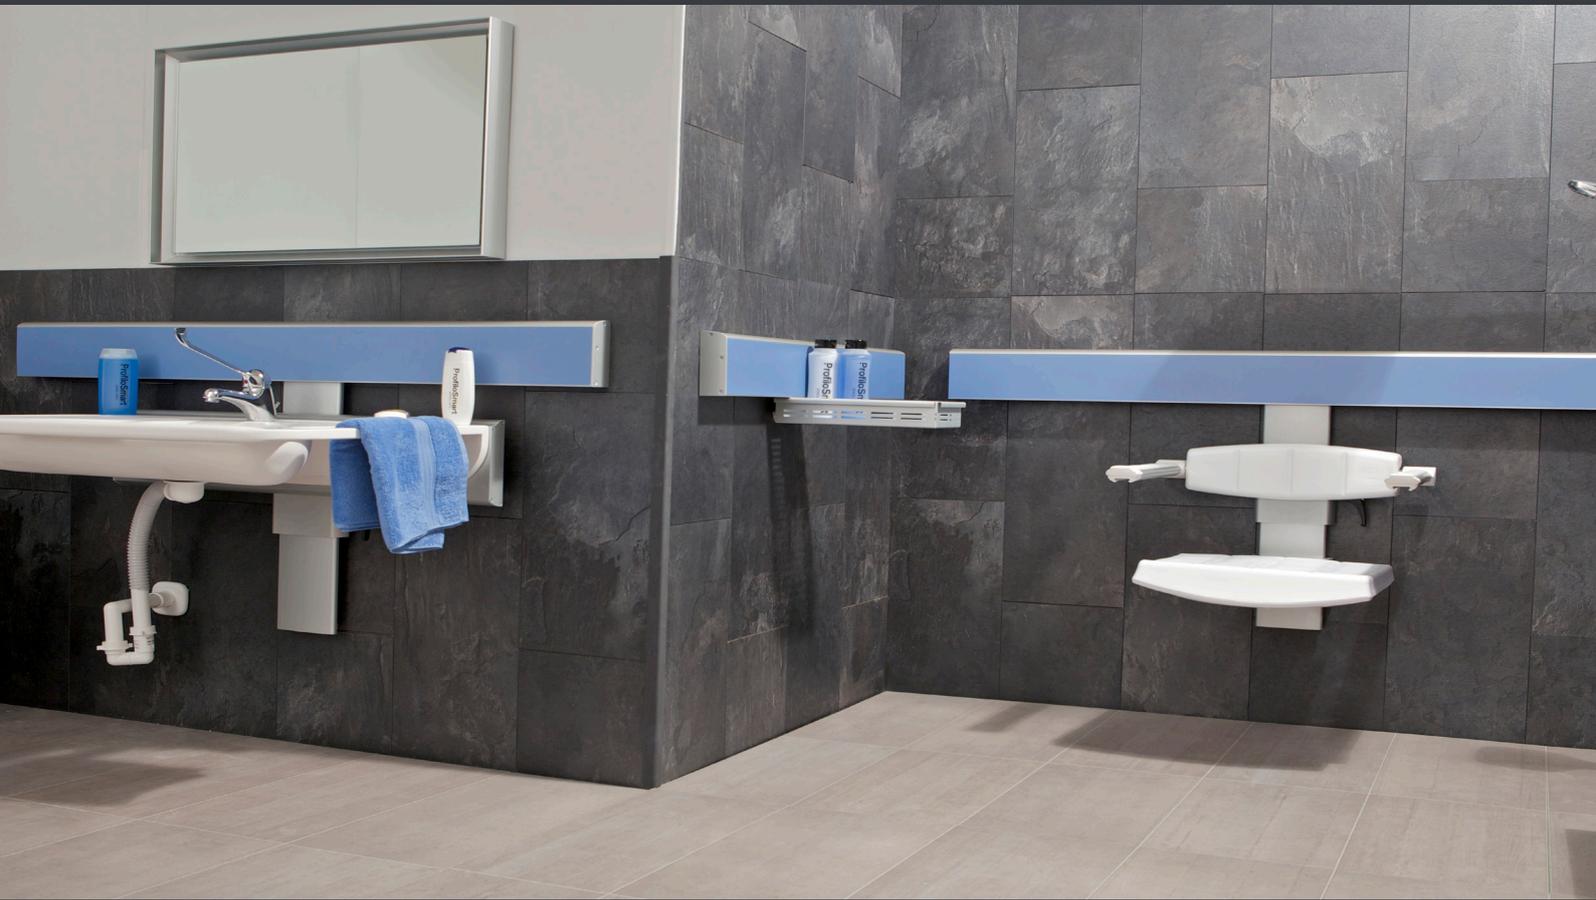

The system can accommodate power cables, LED lighting, as well as concealing and protecting the mechanisms from damage.

The cover design leaves complete freedom to the architect, interior designer and end user to decide the best decorative option to blend or contrast the system, matching the design of the bathroom.

## ***Fully Custom***

The cover design is available in anodized aluminium, and an optional stainless steel look.

Full customisation is available using our sublimation process, this is not printed, neither is it a graphic or sticker, it is a unique process that utilises a durable polyurethane powder coating, into which any photographic image can be transferred to create your own custom cover.

# Benefits for the facility manager

## Versatile Environments.

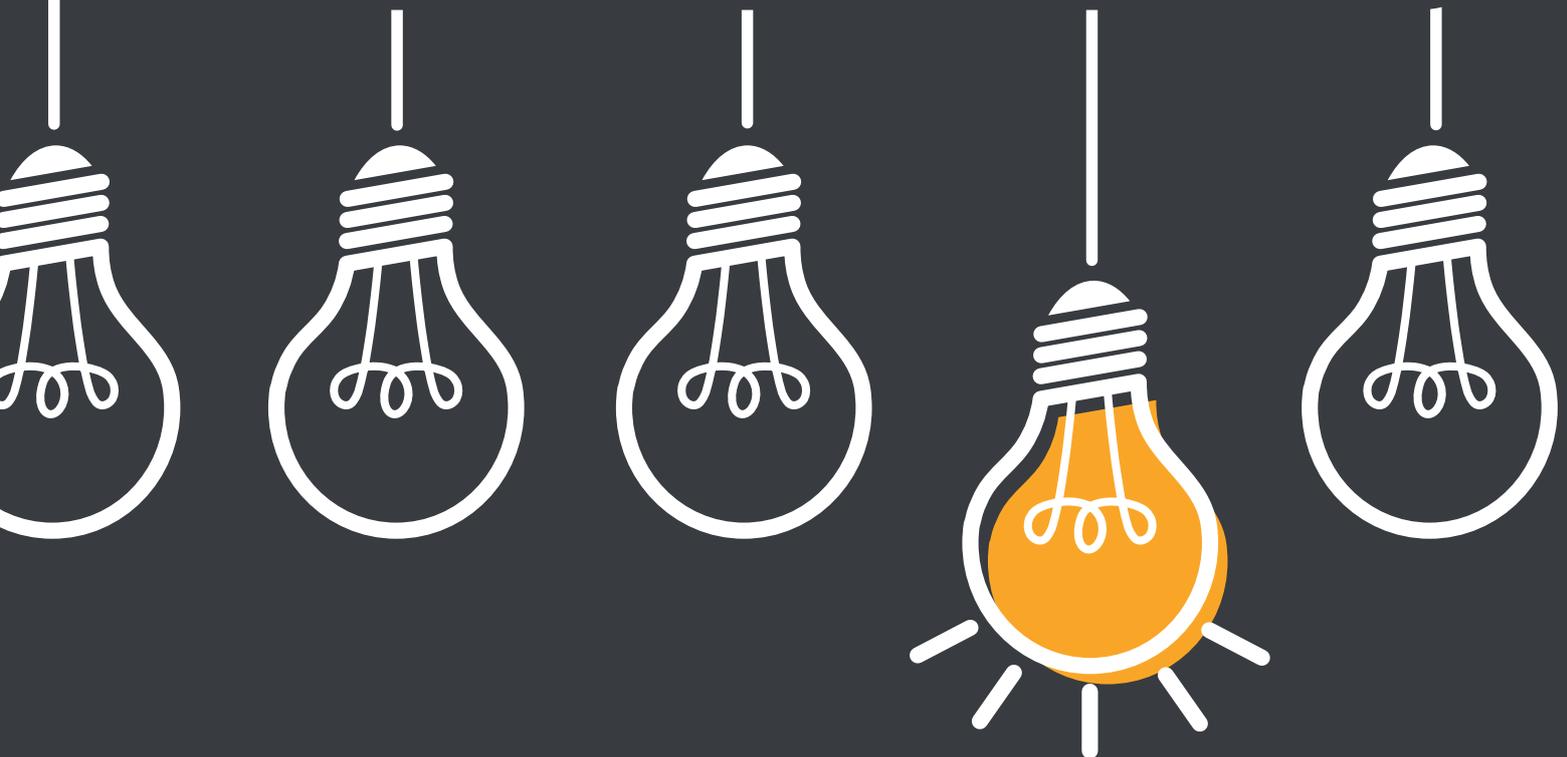

Flexible environments are resourceful. There is no need to fully equip every single bathroom.

What you need is Profilo Smart's horizontal track in every bathroom and then you will be able to equip the accessories where they are needed. This way, instead of moving patients depending on their changing needs, you can just move the related accessories.

## Different, Better.

Flexibility is something deeply embedded in our philosophy. We made our products flexible to help the users to enhance their independence. But we also apply the concept of flexibility to the design process to offer the chance to adapt the system to every possible bathroom style.

Thanks to these core beliefs, we are able to offer healthcare facilities management the possibility to differentiate their facilities from competitors, significantly improving their design.

# Benefits for the patient

We believe in patient's individuality. Each one has their own needs and everyone is different from the other one.

## Changing Mobility Needs

## Different Body Characteristics

Thousands of different needs, especially in the bathroom

Profilo Smart's Flexible system represents the perfect solution to address the needs of anyone, regardless of mobile capabilities and body characteristics.

# Flexibility

A flexible environment is a smart one:

It is versatile and can be adapted depending on the individual needs of each user. In addressing these needs, Profilo Smart balances the effect of reduced mobility, thanks to the ability to move accessories in different directions.

*Height and sideways adjustable*

*Fixed*

*Removable*

*Height adjustable*

# Easily removable

Adapt the bathroom environment according to the user's needs.

Add, change or remove the bathroom accessories easily, at anytime.

Choose between a wide range of accessories and finishing.

Place the bathroom accessories anywhere on the track without any tools.

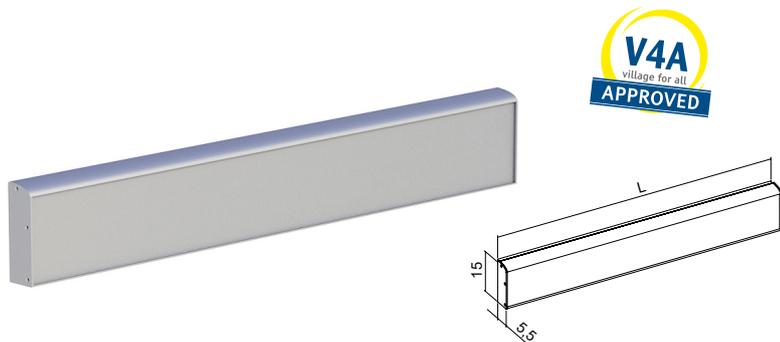

# Track and Cover

Profilo Smart's Track & Cover is what makes the system flexible. It enables the bathroom environment to adapt to anyone's needs and offers an unprecedented level of comfort and safety.

The track has been designed to support LED lights and to allocate electricity cables in two different cable ducts (internal and external). Moreover, in order to make the alignment of the two sections of the track easier, we designed a cavity in which installers can insert a special guide-bar to make the operation quicker.

## Wall mounted horizontal track

with cover for insert and side caps

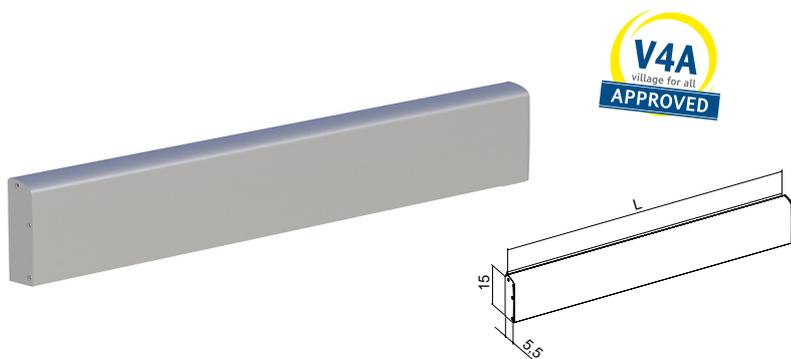

Item code	Length
PS11-102-70	Custom size

Product Line	Smart
Material	Aluminum, ABS, PA6 + 30%, FG, Medical PVC, Stainless steel

# Shower Seat

The range of shower seats has an aluminum structure with internal components comprised of stainless steel and nylon. The arm support areas are made of lacquered thermoplastic with a non-slip, warm touch and scratch-proof finish. The backrest and the sitting cushions (easy to remove for cleaning or replacement) are made of XL EXTRALIGHT®, which means they are light, flexible, comfortable and anti-bacterial.

# Basin Brackets

The brackets are designed to help the user to adjust the height of the washbasin in order to address different needs. No tools are required for any adjustment which is a great advantage for both users and caregivers.

The brackets have an aluminum structure with internal components comprised of stainless steel and nylon; they are height adjustable with a 29 cm excursion and are equipped with a quick locking system for additional safety.

# Wash Basins

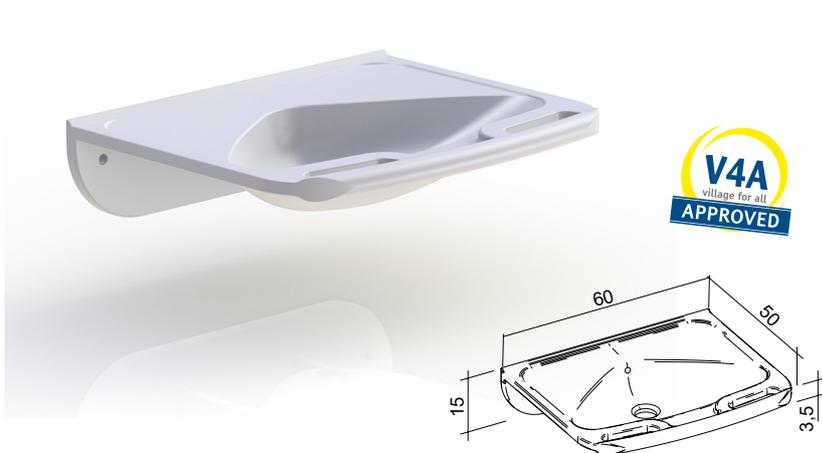

Our range of ergonomic washbasins in white Solid Surface are designed to be fixed on an adjustable bracket or to be wall mounted.

They are the ideal solution for addressing the needs of wheelchair users. The ergonomic washbasins have a slim and light structure, the lack of seams and cracks of the Solid Surface inhibits the growth of germs and bacteria, all of which make the product even more durable.

It is non-porous, hence stain resistant and extremely easy to clean.
