

COSMOS COLLECTION

Be Inspired by our exciting offering of 15 new designs, engineered to create a contemporary feel in your Commercial or Residential space

In this collection we have used ZEROXY™, a new flame retardant polyester made using modified polymer technology. Using a phosphorous compound, it has superior self-extinguishing and flame retardant properties that are maintained even after washing and dry cleaning.

Products woven with the ZEROXY™ Inherently Flame Retardant Polyester Yarn have achieved extensive Fire Retardancy Certification from relevant authorities worldwide.

For the Australasian market excellent AS1503.3 and AS1530.2 test results have been achieved and these reports are available on request.

SPECIFICATIONS
