

Regal Grass

*...brings life to your garden
with lasting green*

For over 8 years, Regal Grass has been a brand that stands for innovative artificial turf that brings life to gardens and roof terraces. Today, thousands of garden owners around the world are enjoying the luxury of Regal Grass.

As market leader in its segment, Regal Grass takes its responsibilities seriously. With our policy, which is focussed on the long term, we endeavour to set a good example. Corporate social responsibility forms the basis of our company philosophy. The choice of materials for producing Regal Grass is based on three pillars: awareness, durability, and ecology. This results in the natural appearance of Regal Grass, its feeling wonderfully soft to the touch, and its exceptionally long life expectancy. And at all times, we keep in mind our source of inspiration: nature itself.

During the production of Regal Grass fibres, we take care to reduce CO₂ impact to an absolute minimum. Our grass fibres are 100% recyclable and do not contain any substances that may harm you or the environment. Together with TenCate, the world's largest producer of synthetic grass fibres, we continue to develop new production methods that result in a better, greener environment. Because we have one major shared vision: the greener, the better!

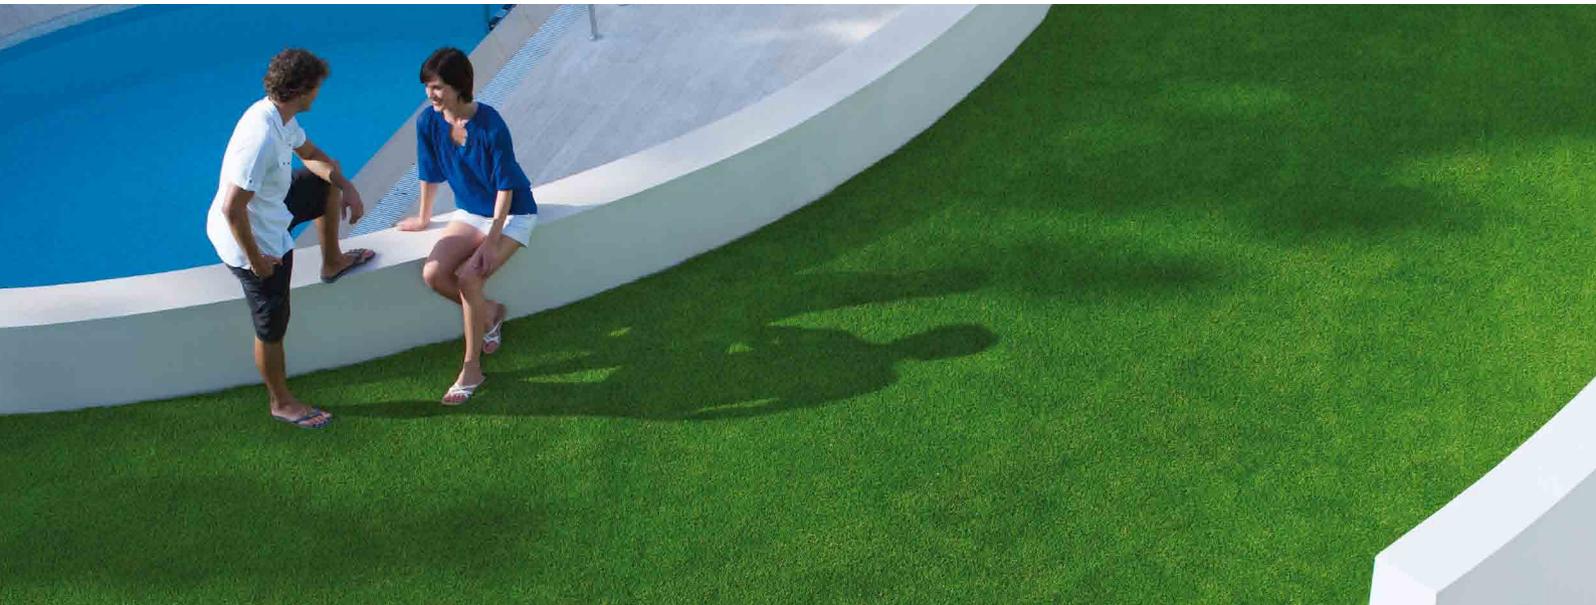

The Grass

...for the love of your garden

In gardens big or small, open or enclosed, shady or sunny, Regal Grass is at home in any environment. It can be used in almost any conceivable situation. Particularly in places where grass could never normally grow, Regal Grass provides the fresh appearance and experience of natural grass.

With Regal Grass, it's easy to lay a natural-looking lawn, but it is also ideal for use on balconies and roof terraces or in courtyard gardens. Or what about Regal Grass as a safe playing surface for your children? Be inspired by Regal Grass. The possibilities are endless.

The hassle-free grass

Mowing the lawn? Trimming the edges? Let's be frank, there are more enjoyable things to do in your free time. With Regal Grass, you will have more time to enjoy those things. With no effort, your grass will always look perfectly mown and tended. Even better: Regal Grass doesn't need a drop of water, no matter how hot or dry it is. Which means you can even enjoy a beautiful lawn at your holiday home, with minimum maintenance. Even your pets will enjoy Regal Grass.

The grass that can bear rough treatment

Regal Grass is completely unperturbed by whatever winter or summer may throw at it. The grass retains its rich colour year after year. Regal Grass is the ideal playing surface for children, now matter how boisterously your kids or pets play. Regal Grass can take it.

The grass to be admired

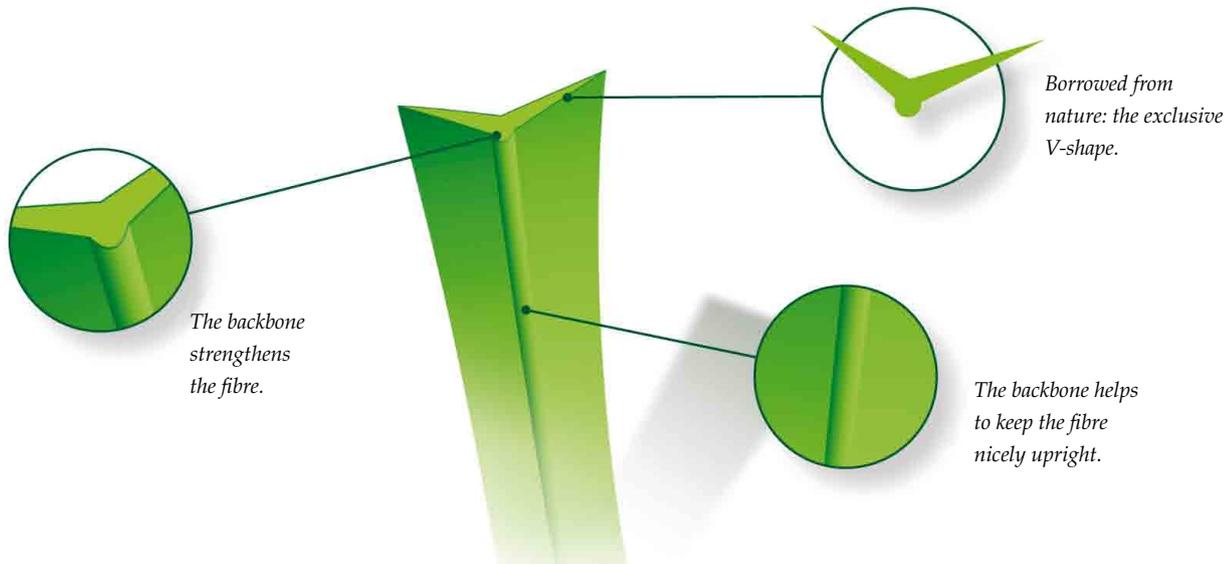

You can be proud of your choice of Regal Grass. Never again will the neighbours' grass be greener. Regal Grass is produced entirely from environmentally-friendly materials, so you and your family can relax and feel safe. Regal Grass, the best choice for a long-term relationship.

Regal Grass

...the natural V-shape

The designers of Regal Grass took their cue from nature. The design of the grass fibres mimics not just the colours, but also the shape and structure of natural grass. A robust core, the “backbone” of the fibres, helps to maintain the upright stance of the grass. Even under heavy use, the grass is more able to spring back into shape. All Regal Grass products have this unique backbone, which is produced exclusively for Regal Grass by Royal TenCate, world market leader in the field of artificial grass fibres.

Regal Grass® is manufactured using the patented V shape.

Just like the real thing

Regal Grass is produced with the utmost care. The height and density of the grass are perfectly matched. Combined with the additional materials needed for installation, the end result would make Mother Nature jealous.

Regal Grass

...the choice is yours

Regal Grass is an innovative brand, which is continuously developing. We have a solution for any grass situation. You will find the most popular ones in this brochure. For the complete and current range, we gladly refer you to our website www.regalgrass.com.au. From there you can contact one of our carefully selected Partners for a personal design consultation and pricing.

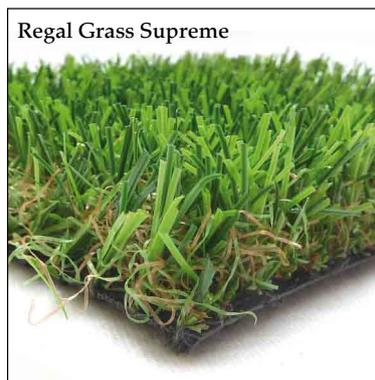

Regal Grass Exclusive

Regal Grass Exclusive

The best grass on the market. Fine and flexible artificial grass fibres in two different shades of green form a dense turf. Regal Grass Exclusive has a very natural appearance and feels very soft to the touch.

Soaking up the sun in the grass, kicking off your shoes... What could be better than stretching out on a soft lawn? Can't you just picture it? The turf is finished with earth-brown ceramic sand, which enhances the natural effect.

Regal Grass Delite

This variety is similar to Regal Grass Exclusive and has the same dense covering of grass. However, Regal Grass Delite does not have to be finished with ceramic sand. A frizzy brown fibre replaces the sand and gives the grass its natural appearance. The pale brown fiber looks like dehydrated grass, visible just underneath the green fibers, which is also a phenomenon in natural grass. Moreover, Regal Grass Delite is made with the unique v-shaped fiber.

Regal Grass Supreme

Regal Grass Supreme is also like Delite a full grass system, which means no sand infill is required for installation. It is made of a soft polyethylene monofilament for its soft feel. The artificial rootzone supports the monofilament blades to give it a grass-like volume.

Regal Grass Superior

The blades are made of a new revolutionary grade of soft Polyamide which at the same time has excellent resilience characteristics. We have succeeded in developing such subtle fibers, just 1mm width, that the grass is very soft and natural looking at the same time. The grass blades are flexible and point out to all directions.

Above mentioned products can be used for all (indoor) applications where sand filler is not appropriate. Like all Regal Grass products, they are manufactured from durable grass fibres, which means they can be used outdoors as well, for example on roof terraces, balconies or in the garden.

Regal Grass

...at home in your garden

The preparatory work

Regal Grass can, in principle, be laid anywhere, provided the base on which it is to be laid is stable, load-bearing and permeable. Depending on how the turf will be used, there are several ways of laying the base. Basically, the principle is the same as for (ornamental) paving. Usually, Regal Grass is laid loose, i.e. not firmly attached to the base. In an open location, however, it may be advisable to fix the grass in place. Again, there are several ways of doing this. A sound base is important in order to bear the weight of the top layer and keep the lawn smooth over time. For more information, take a look at our website www.regalgrass.com.au, and make contact with one of our Partners listed there.

The installation

Installing artificial grass is a specialist job. On site, the installer carefully cuts the Regal Grass to size and, if necessary, joins the pieces together. This is a precise task, to be performed by an experienced installer. After all, you will be looking at your lawn for many years. The seam joints and lawn edges must be as invisible as possible. In choosing Regal Grass, you are choosing impeccable quality. But what's the point of impeccable quality if it isn't expertly laid? Precisely. Our Partners have the training, experience and tools to do a professional job. For an up-to-date list of our Partners, see our website.

A complete package: from product to installation

When you choose Regal Grass, you are choosing a complete solution. Not just the top layer, but all the necessary materials have been developed especially for Regal Grass. Regal Grass seam tape and a special 2-component adhesive are used to join the pieces of grass. This creates a very strong joint, and guarantees that the seams will remain joined throughout the life of the grass.

Artificial grass products with a long blade, such as Regal Grass Exclusive, need to be scattered with a filler material. For this, Regal Grass only uses natural and environmentally friendly materials. Regal Grass is scattered with two types of sand. The sand selected meets specific quality requirements, to ensure that it does not damage the artificial grass fibres or interfere with the lawn's permeability. The function of the sand is to make the artificial turf heavier, and to surround the artificial grass fibres so that they remain upright.

The earth-brown sand is applied last, and serves to enhance the lawn's natural appearance.

Guaranteed Regal Grass

The choice of materials for producing Regal Grass is based on the three pillars awareness, durability, and ecology. Regal Grass is manufactured from TenCate fibres. These fibres are synonymous with quality and durability, so that you can enjoy a beautiful lawn for many years. Regal Grass is furnished with an 8-year warranty. In addition, our products are 100% recyclable and do not contain any substances that may harm you or the environment.

After delivery, you will receive a copy of the Regal Grass Warranty and Maintenance booklet and where applicable a copy of your original guarantee issued to you by the Regal Grass partners.

Regal Grass

...keeping it natural

With minimum maintenance, Regal Grass will give you many years of pleasure. To retain the natural appearance and beauty of Regal Grass, you must keep the lawn free from debris – both natural and manmade. Leaves and other materials can easily be removed with a stiff broom or a leaf blower. This will largely prevent the growth of weeds. The amount of weed growth also depends on the environment, e.g. whether the surrounding area is wooded or urban. However, any weeds can easily be removed by hand or kept at bay by applying weed killer. Keeping your lawn free from debris will also ensure that the sand layer does not become obstructed and impede drainage. Other (liquid) contamination, such as soft drinks or pet excrement, is washed away by the rain, or can be rinsed away with clean water.

Sweeping with a broom will also ensure that the Regal Grass fibres remain nicely upright. If a heavy object such as an inflatable pool is placed on your Regal Grass lawn for any length of time, the weight will flatten the grass blades. Once the object has been removed, the blades can easily be brushed up with a stiff broom, to restore the natural appearance of Regal Grass.

Care must be taken with fire and hot objects, as these will melt Regal Grass on contact. Any melted spots or other damage to your grass can, however, be repaired. Simply contact your Partner for assistance.

Regal Grass

*...the ultimate artificial
turf specialist*

Regal Grass is renowned in the consumer market. But did you know we are also active in the design of public spaces, playgrounds with shock-absorbing foundations, and even in the layout and installation of golf greens?

So are you a real golfing enthusiast? With Regal Grass Golf, you can turn your own garden into a beautiful golf green. Improve your golf handicap in your own garden by creating your own putting green. And forget the time-consuming maintenance of ordinary grass as well! Your private golf green is completely tailored to the available space. If you want more information, please contact the Regal Grass Golf specialists; visit www.regalgrassgolf.com.au
