Introduction

Are you familiar with the concept of green walls? Believe it or not, they're more common than you think! History shows an abundance of hanging gardens across several cultures, making the type of decor as timeless as it is aesthetically pleasing.

Artificial green walls are the newest incarnation of this old trend, combining convenience with beauty. In fact, offices across Australia and the world are utilizing artificial green walls in their workspaces. Could it be a good fit for your office? Read on and we'll tell you all about the numerous benefits of green walls, and why they're worth adding to your workspace

Did you know we install?

Benefits of Artificial Green Walls

If you've seen a green wall in someone's home or office, you may immediately think it looks great, but you wouldn't want to deal with the maintenance. In actuality, the green wall you looked at may have been an artificial green wall!

When you have the right plants, it's hard to tell the difference between a natural living wall and an artificial one. If you can't decide if you want an artificial green wall in your home or office, here are some benefits you need to be aware of.

Low Cost and Low Maintenance

The upfront cost of an artificial vertical garden is much lower than a living one, and there are no continuous costs for maintenance. You don't have to worry about placing the garden in front of or near UV light, because it will never die. The best part about it is you don't have to water it. Not only will this save time and money, but it could prevent possible water leaks in your walls, ceilings and floors.

Looks Realistic

It's very easy to get a realistic looking artificial vertical green wall. Living plants aren't necessarily designed to live indoors, but artificial ones will look great anywhere. You won't have to remove any dead leaves or branches at any time. One of the best parts about getting an artificial vertical garden is the results are instantaneous. As soon as it's installed, you will be looking at a vibrant green wall! This is different from a living wall, which could take several weeks before the plants begin to flourish.

Indoor and Outdoor Use

Who said only living plants have to be outdoors? An artificial green wall looks just as natural outdoors as it does indoors! Different panels are available, which are best suited for one area or the other. You can essentially put an artificial green wall anywhere, whether it's in your door entryway, the side of your shop, an interior room, basement or anywhere you want a little greenery.

Noise Reducing

Office buildings usually seem like they are peaceful and quiet, but that is far from the truth in some cases. Depending on where the building is located, there could be a lot of noise pollution in the area. Not only is the excess noise distracting, it can also be inconvenient when you can't have a normal conversation with someone without raising your voice. Before you decide to move offices to a more secluded location, try incorporating vertical gardens. These have proven to be effective against noise pollution and could be exactly what you're looking for to create a quieter work environment.

Leaves Reflect and Absorb Sound

Studies have indicated plant leaves actually reflect and absorb noise energy. You will be able to tell a noticeable difference in the noise pollution of your surroundings when you add an artificial green wall. The more green wall plants you have around your office, the more noise will be absorbed. Not only will noise pollution from the outdoors be absorbed, but the extra noise created inside the office can be reduced as well. Echoes from other conversations, printer or fax machine sounds and other common noises will be drastically reduced to create a more peaceful and less distracting work environment.

Green Walls Obstruct Urban Noise

If your office building is downtown in a large city, you likely have to deal with hearing horns honking, crashes, tires squealing and general traffic noise. Having a hanging wall garden in your office and around the building can deter a lot of the noise so it's not quite as distracting. No more having to listen to the never-ending construction going on outside your building!

Types of Green Walls

Whether artificial vertical gardens are used indoors or outdoors, the effects are the same. Artificial hanging gardens can be just as effective as the real thing when used properly – and you won't have to worry about spending a lot of time maintaining them. As discussed earlier, artificial gardens require very little maintenance and you can enjoy them for a long time.

Stress Reduction

How Green Walls Can Reduce Stress

People always try to find different ways to reduce stress either at home or at work. Before you try different kinds of medications or other stress relieving techniques, try incorporating an indoor green wall instead. Your green wall could be living or artificial, and either one could attribute to reduced stress.

Most people who live in urban areas don't get to see vegetation much, which isn't healthy. Studies show communing with nature has a calming effect, so people are missing out on some great relaxing benefits by not surrounding themselves with it. Here are some ways an indoor green wall can help you reduce your amount of daily stress.

Greenery Has a Calming Affect

Simply being able to see greenery seems to calm humans. Whether you have an artificial vertical garden or a natural one, seeing the plants on the wall is more calming than a bare wall or some other kind of wall decor. Some hospitals even use green walls to help calm patients and reduce stress. No matter if the majority of your stresses come at home or at work, an indoor green wall can be a major stress reducer.

Breaks Up Monotony

Investing in artificial greenery panels for home office can break up the redundancy of what you see every day. If all you see are buildings and concrete throughout the day, a view of a calming green wall when you walk inside can work wonders on your overall attitude and demeanor. The great thing about having an artificial vertical garden is you can add as many as you want to over a period of time. You'll likely appreciate the stress relieving nature of your artificial vertical garden so much that soon you'll be ready to invest in another one!

A vertical garden wall featuring a black metal grid structure against a brick wall. The grid is densely populated with variegated green and yellow plants, likely Pothos, which are cascading down the wall.
