WOORAK HOUSE

When Megan Burns of CM Studio was engaged to design a new beach house on Sydney's Northern Beaches, she knew that the material selection was critical to the project's success. CM Studio had used Rockcote previously and appreciated both its artisan qualities as well as its reliability. A layered natural palette of materials meant that Rockcote Coloured Renders were the perfect choice to compliment the calm and casual space.

MEET THE TEAM Anthony Wakefield from Triple A Rendering was responsible for the application of the Rockcote products at Woorak House. Head to [rockcote.com.au](https://www.rockcote.com.au) for insider tips, expert advice and information about product specifications and use.

FINECOTE

Finecote is the smoothest, flattest and most subtle rendered finish in the Rockcote Coloured Render Range. The fine texture is brought to life by light reflective particles of luminescent sand contained in the formula. This creates a consistent, seamless finish.

PROTECTIVE

Rockcote Coloured Renders deliver a tough, flexible, and water-resistant finish with long term exterior protection, designed for Australian conditions. The integrated colour permeates the render layer making scratches and damage less noticeable.

A NATURAL AESTHETIC

Recreate the beachy vibe of Woorak House. Rockcote Coloured Render offers a timeless and beautiful surface quality that painted surfaces cannot achieve. With an unlimited colour range, it can be tailored to your desired aesthetics.
