ASIM HINGED HOOK BOLT SECURITY LOCK

Asim Hook Bolt Lock

Operation:

A reliable mortice lock for hinged security doors having with a pivoting latch bolt that is retracted by an outside or inside lever. Closing the door causes an auxiliary bolt to release the latch bolt enabling it to enter the strike plate. Once fully extended, it may be locked (or unlocked) from either side by key.

Special Features:

- Interior snib lever for quick and convenient locking without the need to use a key.
- The jemmy-resistant strike plate is designed to deform under attack to enable the strike plate to remain engaged with the bolt, even as the door is jemmied away from the door jamb.
- A pivoting latch bolt hooks in behind a profiled strike plate to provide enhanced resistance to forced entry.
- Australian design and manufacture.

Multipoint:

Asim lock body may be connected to multipoint kits to provide three-point locking. These kits provide a top and a bottom bolt, each connected to the main lock body by a steel cable. The remote bolts are activated whenever the door is locked by key or snib (see next page for details).

Installation Features:

- Fits into industry standard cut-outs.
- Standard lock fits door frames from 19mm to 25mm thick.
- Suits both left-hand and right-hand hinged doors.
- Fitting instructions can be downloaded from www.alspec.com.au or QR code.

Keying:

- AA8 5-pin double cylinders with a cam-stop(spring).
- Can be keyed alike.

Finishes:

A range of powder coated finishes available as shown below.
