

timber TEK

Kennedy's K-FAB high tech timber

strong, sturdy and resilient

The combination of Kennedy's recycled timber and the latest techniques in timber fabrication have resulted in our latest product, K-FAB.

Scientifically tested to ensure maximum long term in situ performance, K-FAB is a timber that is substantially stronger, sturdier, and more resilient than an equivalent solid timber.

K-FAB can be manufactured using Low VOC glue and supplied with a variety of finishes. Options can include resin filled nail/bolt holes that resemble natural timber knots.

Available in fully seasoned large sizes, including premium aged recycled hardwood, K-FAB is able to span larger distances, often without the need for additional support.

K-FAB timber is suited to a large variety of commercial and residential applications. The technology employed in its production results in a product that is not only visually appealing, but by its nature, extremely strong, durable, and versatile.

Some common applications, both structural and decorative include: bench and bar tops, posts and beams, seating, and stair treads.

Black resin filled bolt holes

STANDARD SIZES
WIDTH
450 mm
600 mm
900 mm
1100 mm
Other widths available on application
THICKNESS
32 mm
