Smoke Control's Full Life Cycle Service ensures that at any stage of the project – from design through to commissioning – the only company responsible is Smoke Control.

100% QUALITY

The Fibershield - S concertina type fire curtain was invented by Stoebich Brandschutz GmbH in 2007. In 2009, Smoke Control introduced it to the world with the first ever installation of the Fibershield - S in New South Wales, Australia. This photo is of this first ever installation.

Since then Smoke Control has remained the global leader with no other single organisation having installed more of these types of systems.

So why the Fibershield - S ? While others have tried their best to copy this system. They have missed the detail. The important details, that give you value for money and an asset that will last the life of your building with no unexpected or hidden maintenance costs.

The original and the best;

- Complete system cycle tested for 10,000 maintenance free cycles
- High quality fittings that will last the life of the product
- Unique floating bearing system which allows the curtain roll to move as it increases and decreases in diameter
- The worlds most experienced installation team
- Folded and stitched corners, not a flat fabric that will bunch, wear and cause irregular operation
- High quality motors tested to 50,000 fault free cycles
- Mechanical upper and lower limit settings for ease of adjustment throughout the life of the product
- Full life time conditional warranty for your asset.
- High quality CE Labelled (third party certified) controllers
- 2 hour fire and smoke containment
- Fire tested in accordance with AS1530.4

100% Customer Service

Smoke Control offers obligation free technical support throughout your design and documentation stage. We are also happy to provide obligation free pricing so that you can accurately prepare your budgets.

We have also prepared a complete kit for your documentation requirements. Simply download from a complete set of specifications and drawings from our website. If you would like our drawings in DWG format, simply give our technical department a call or email your request.

We will endeavour to respond the same day !

100% Flexibility

Quality folded corner details mean that the system folds evenly and in the same manner each and every time.

Virtually unlimited shape configurations are possible with open ends or joined to form a continuous system.
