

Speed Cushion

WORKING HARD TO
KEEP THE WORLD ON
ITS FEET

PRODUCT DESCRIPTION

The best traffic calming approaches find the middle ground between forcing drivers to slow down at regular intervals (e.g. traditional speed humps) and providing visual cues which encourage driving at consistently slower speeds.

This 'sweet spot' minimises environmental noise and reduces the impact on drivers and vehicles while effectively reducing speeds.

Grip Guard's range of rubber speed cushions are a durable and highly versatile way of visually and physically slowing traffic. They are a more modern and environmentally friendly approach to doing so than the use of speed humps. Speed cushions have the added benefit of allowing emergency vehicles and buses unimpeded access to an area.

Rubber speed cushions are easy to install and remove. This makes them suitable for permanent or temporary installation, including traffic calming trials. Professional installation is available if required.

Other benefits of Grip Guard rubber speed cushions include:

- made from solid rubber, resistant to UV, weather and oils; more durable than concrete or asphalt
- modular design facilitates fitting to any width or camber of road, and in a variety of formats for different speed requirements
- supplied ready-to-install with all fasteners
- include high visibility markings and reflective components for maximum visibility, day or night
- comply with government guidelines
- instant results.

DIMENSIONS

LENGTH – 3000mm, WIDTH – 1800mm, HEIGHT – 65mm,
WEIGHT – 280kgs
