

To Whom It May Concern

Please find the following documentation as evidence that Surface Designs TPV by Rosehill has been tested by Professor David Eager and has complied to the Australian Standard AS/NZS4422:1996, "Playground surfacing specification, requirements and test method" ensuring it is fit for purpose in the Playground Industry.

All test procedures have been carried out over a concrete base, however, should this product be installed on a crusher dust or similar surface, it is possible to increase the critical fall height of the safety system.

- *Please note that installation procedures/practises will vary from contractor to contractor along with the different materials used which may differ the final outcome.*

Kind regards,
