

MORTEX

for mortar just add water

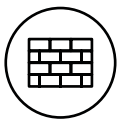

Mortex is a factory manufactured, quality assured premixed M4 rated mortar solution. It can save labour time, increase efficiency, removes the need for on site blending, and is compliant with AS3700.

Mortex takes the guess work out of mortar blending and reduces the potential for under strength, non compliant mortar. Using Mortex can ultimately reduce potential liabilities and save money and time on rectifications. Mortex is a preblended mixture of oxides, cement, specially graded sand, lime and admixtures which creates a high quality mortar blend when combined with water.

Mortex is a factory produced M4 premixed mortar to the requirements of AS3700:2018 Table 11.1. With the adoption of ISO9001:2008 principles, the mortar constituents are accurately measured and blended in a controlled environment to ensure consistent, homogeneous mortar is produced on-site.

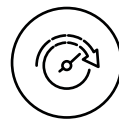

Mortex offers a host of benefits including:

Consistency

Mortex is factory manufactured which means it is quality controlled and tested to ensure the mix provided is consistent.

It also ensures enhanced structural adequacy as the strength variation of batches is reduced when compared to mortar blended on site.

Save Time and Labour

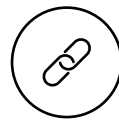

Standard mortar requires a labourer mixing defined proportions of cement, sand, lime and admixtures on site.

Because these components are premixed, Mortex simply requires water to be added to the mix which can save time and labour costs.

Strength

Mortex is M4 rated which means it is the strongest mortar blend specified in the Australian standards.

Durability

Mortex provides a weather resistant and durable mortar and is suitable for most brick and block applications.

Ready to Use

Mortex is pre-bagged ready for use and only requires the addition of clean water. Selected sands, lime, cement and admixtures have been blended together to produce the product.

Compliant and Quality Assured

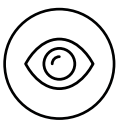

Standard mortars blended on site rely on trades to mix the correct proportions of ingredients to achieve a compliant mortar mix.

Mortex is pre blended to ensure that, when mixed according to the noted specifications, it will comply with Australian standards AS3700.

Long Lasting

Mortex is highly workable and cohesive, with a long board life.
