AUSTRALIA

Bike Racks

CTA Australia Pty Ltd manufactures a range of bicycle parking and holding rail products including inverted "U", Square shape and wall mounted units.

CTA bike racks and holding rails are available as surface mount or cast in-situ option.

Manufactured in 316 marine grade 50mm diameter stainless steel tube with a solid wall thickness of 2mm, to last the test of time.

Several styles are available to suit all applications which conform with the Aust-Roads Guide to Traffic Engineering Practice, including high visibility units which include reflective tap to ASI906.1

Wheel Stops

Manufactured from solid rubber with four locating points and include high visibility yellow panels for improved safety. They are UV resistant, will not crack, craze or chip away.

CTA wheel stops are light weight, easy to install and provide impact prevention for buildings adjacent to parking facilities.

Available in 1800 or 1650mm lengths that conform with AS2890.1 CTA wheel Stops can be installed onto gravel, bitumen or concrete substrates.

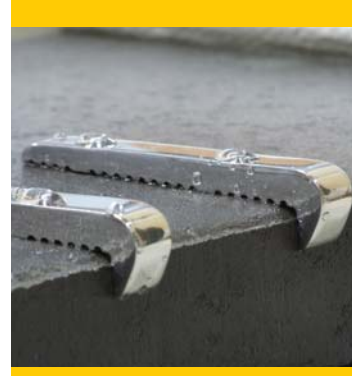

Skateboard Deterant

CTA skate board deterrents are manufactured from 316 marine grade stainless steel and are available in a multitude of styles including: mushroom and cylindrical knobs; square faced and bull-nosed edge nosings.

CTA skate board deterrents eliminate potential damage to planters, walls, benches and other architectural features caused by skateboards, in-line skates and bicycles. Further; they may reduce any potential liability for property owners who in some cases can become responsible for injuries.

CTA Skate board deterrents are a cost effective solution to chipped, broken or wax spoiled retaining walls and the like, caused by skate boarders, bicyclists and in-line skaters.
