AM-BOSS Access Ladders make storage easy

Common storage problems can easily be solved with the installation of an AM-BOSS ceiling access ladder. Everyone has things they need to keep and store – or just can't bear to throw out – that can contribute to clutter and take up valuable space in the home. An AM-BOSS ceiling ladder opens up a lot of extra space that allows those extra possessions to be stored conveniently and neatly out of sight. Ceiling space is often an untapped storage resource that costs just a fraction of the price of most other storage solutions and can be easily accessed with an AM-BOSS ladder. Easy access to the ceiling cavity is also useful for maintenance purposes in relation to air conditioning, heating ducts electrical wiring and pest control. In this way, AM-BOSS is great for both domestic and commercial applications.

AM-BOSS has a range of models to suit ceiling heights from 2000mm to 5500mm. The **Access-Boss** has a standard 400mm ladder width, and the **Big-Boss** caters for those who want a larger ladder, at 500mm wide. The **Heavy Duty series** is rated at 400kg at any given point, while all other ladders are rated at 150kg at any given point. Aesthetically, these ladders can blend into the ceiling with little intrusion. There are no visible hinges or screws, and the hatch can be painted to blend with the existing ceiling colour.

AM-BOSS ladders are a safe option as they comply with the Building Code of Australia and are CodeMark Certified. AM-BOSS ladders have been manufactured in Australia since 1979 with high quality construction as the utmost imperative – a reliable and robust alternative to those shaky step ladders. AM-BOSS ladders are constructed in welded aluminium, and all steel parts including springs are zinc-plated. The ladders are mounted in a way that allows clearance between the steps and ceiling hatch for safer footing.

In a commercial environment, AM-BOSS caters for OH&S requirements by manufacturing to suit. Modular ladder systems are cut to size to suit vertical heights. These may not comply to Australian Standards due to irregular step spacing. AM-BOSS does not supply Modular systems as they manufacture to suit each individual environment.

AM-BOSS ladders are also very easy to install. They come fully assembled, complete with fitted architrave, dust and draft sealing strips, counter balancing and a simple height adjusting mechanism to eliminate the need for cutting the ladder to length. Installation can be done by one person as fixing clips will hold the unit in place once pushed into your chosen ceiling opening. Each ladder also comes with a comprehensive installation guide. In a domestic setting, the ladder is guaranteed for 20 years.
