SIEMENS

Enhanced clarity throughout your organization and premises

**With Siveillance VMS 100, 200 and 300
adaptable video management software**

Intelligent IP video management platform:

Tailored to your specific needs

Increasing security breaches and the intensity of threats, combined with stringent regulations and an ever-increasing amount of video data to be managed, are just some of the challenges that today's video management systems need to provide an answer to.

Siveillance™ VMS allows efficient visual verification of events. Its modular system structure and scalability make it easy for any organization to adapt to changing needs. The emphasis on openness enables Siveillance VMS users to perform any necessary upgrades and modernizations in a cost-effective manner.

To address the specific requirements of small and medium size businesses up to complex deployments, Siveillance VMS is available in three versions: VMS 100, VMS 200 and VMS 300.

Video management using Siveillance VMS:

The best way to view video

The Siveillance VMS 100, 200 and 300 versions feature full flexibility and scalability to fulfill your video management requirements. Depending on the version, Siveillance VMS can handle an unlimited number of cameras, servers and users across multiple sites.

Increased efficiency
Supported by quick installation and seamless updates, intuitive operations promote optimum operator productivity. By making use of three unique viewing clients – the video client, web viewing and mobile client – the tool provides access to live and recorded video for different personnel responsibilities. This flexibility results in a more proficient management of video data and allows you to stay informed, wherever you are.

Protect your investment
With Siveillance VMS, we go beyond meeting basic video management requirements and focus on achieving maximum return on investment through superior technology.

The system can be connected with other portfolio elements; such as Siveillance SiteIQ Analytics, intelligent video analytics, plug-in, or the command and controls solution Siveillance Vantage; or embedded within the Desigo CC total building solution.

System components such as Siveillance VMS Interconnect or Siveillance VMS Federated Architecture provide a cost-efficient and flexible way to establish central surveillance operations across geographically dispersed sites.
Improve security
Siveillance VMS ensures not only the security of people, but also of assets. With advanced add-ons, such as the Siveillance VMS monitoring wall, we can provide an unparalleled situational overview of large surveillance centers, helping to improve response times and ultimately resulting in improved security.

The system also supports compliance with local regulations, allowing the operator to focus on core tasks. The proper safeguarding and handling of evidence enhances information security. At the same time, high system redundancy and availability maximize uptime.

Highlights
- Intuitive operation for increased operator productivity
- High system redundancy and availability to maximize uptime and security of people and assets
- Flexible and scalable system providing lower total cost of ownership

- Lower total cost of ownership
- Flexible and scalable system
- Cost-effective upgrade & modernization

Siveillance VMS

Protect ROI

Improve security

Increase efficiency

- Ensured security of people and assets
- Comply with local regulations
- Enhanced information
- High system redundancy and availability
- Safeguard evidence handling

- Increased operators' productivity
- Intuitive operation
- Efficient management of video data

Siveillance VMS 100

Expandable surveillance for small to medium size installations

Best suited for small and medium size installations, Siveillance VMS 100 provides a complete visual overview of up to 128 cameras. Using scheduled and event-driven rules, a single interface allows users to easily automate security actions and control external systems, reducing the amount of manual tasks required.

- Increases operator productivity via a consolidated overview of security installations
- Ensures intuitive operation through the Alarm Manager's clear overview and appropriate actions
- Easily expandable as business needs change and grow

Siveillance VMS 200

Powerful control for advanced surveillance

Siveillance VMS 200 has a powerful central management interface, allowing large systems with multiple recording servers to be efficiently managed as one uniform system.

With multilayered maps and the add-on option of the Siveillance VMS monitoring wall, the software provides a consolidated view over multiple locations. Ideal for operators who want sophisticated live monitoring, Siveillance VMS 200 facilitates efficient alarm handling and the ability to bookmark suspicious incidents for forensic or post incident review.

- Centrally manages and controls all connected cameras, devices, storage and users via a single user interface
- Automates multiple aspects of the system-based pre-determined policies and procedures in response to events, minimizing the need for manual control
- Operates with high redundancy for increased availability, including edge storage, in the event of a network or server failure
- Allows you to efficiently manage video data by utilizing markers and descriptive notes for the quick sorting and archiving of video data

Siveillance VMS offers a unique approach to streamlining security management for critical infrastructure, wide-area sites, public areas, buildings, and public safety agencies.

Siveillance VMS 300

High performance for high security

With its centralized management of recording servers, users, storage and devices, Siveillance VMS 300 is designed for large-scale and high-security deployments with unlimited cameras and servers. Its centralized management interface enables the efficient administration of the system, including all cameras and security devices, regardless of the system's size or geographical distribution across multiple sites.

- Ensures that video recording is never interrupted using failover recording servers and redundant management servers

- Provides multistage video storage, including video grooming possibilities, for efficient long-term storage, without interfering with active video

- Secures availability of video for investigations via evidence lock, overriding normal video retention and grooming policies

- Enables encryption of sensitive data

Highlights

- Easily expandable as business needs change

- Consolidated overview over multiple locations for increased situational awareness

- Pre-determined policies and procedures in response to events

- Multistage video storage including video grooming

Our world is undergoing changes that force us to think in new ways: demographic change, urbanization, global warming and resource shortages. Maximum efficiency has top priority – and not only where energy is concerned. In addition, we need to increase comfort for the well-being of users. Also, our need for safety and security is constantly growing. For our customers, success is defined by how well they manage these challenges. Siemens has the answers.

"We are the trusted technology partner for energy-efficient, safe and secure buildings and infrastructure."
