

Do quality  
components matter?

**LINAK**®   
WE IMPROVE YOUR LIFE

WE THINK YOU

Professional grade.

When companies invest in commercial furnishings they have an expectation about what they are buying – products that last longer and endure long hours of everyday use.

Key reasons customers choose to partner with LINAK include:

- Design and engineering
- System reliability
- Trusted delivery/supply chain
- Knowledge and service

Furniture manufacturers look to LINAK for dependable **professional grade** products that meet the high expectations of their customers.

End-users know when they see the name LINAK they are investing in a reliable and trusted solution.

Our product signature.

LINAK products have set the standard for motion control solutions in the office furniture market. While several companies try to copy our designs, they can't copy the details, quality characteristics and manufacturing processes born from decades of experience. LINAK signature features are unmatched.

### **Quiet solutions - the sound of LINAK**

Products for the office and home need to have an "indoor voice." The aim is to get the noise level comfortable by controlling both the decibels and the frequency. Our pleasant sound level allows your products to move without disturbing the surroundings.

### **Smooth movement with soft start/stop**

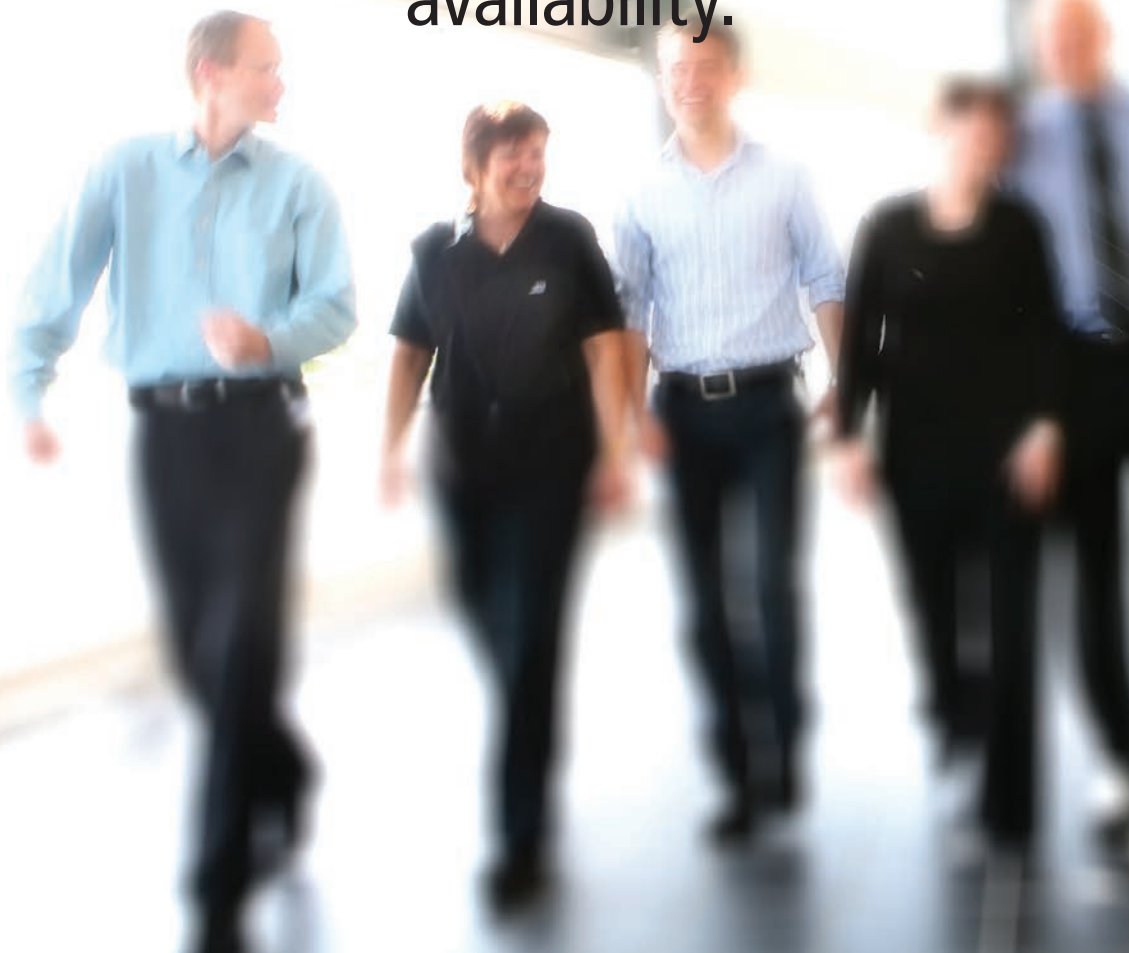

This is achieved through advanced engineering that incorporates parallel drive and a soft start/stop function. The parallel drive compensates for uneven loads, while soft start/soft stop ensures exceptionally smooth acceleration and deceleration of movement between activations.

### **Stability**

A key design element for LINAK is stability. This means as the desk rises it will resist movement when a certain amount of force is applied either to the side or to the front of the desk.

Solutions and  
availability.

Customers want their LINAK sales team to offer innovative, competitive solutions and be available when they need them. This is exactly why LINAK has approximately 1,600 dedicated employees in 35 countries.

### **Accountability: plug & play solutions**

LINAK is the only designer and manufacturer of height adjustable sit to stand components who specializes in lifting columns (actuators), control boxes, controls and switches. Our expert DESKLINE® teams in these areas ensure compatibility on all levels so you can get a complete working system from one supplier. No one else in the industry offers a wider range of actuator systems than LINAK.

### **Availability: team & product**

When surveyed our customers ranked the technical aptitude and the professional communication from our sales team as a top reason they choose LINAK as a partner.

Our global and regional presence ensures there is always LINAK support nearby. We work with our customers from the early specification phase to the end of the product lifetime.

LINAK has expanded our manufacturing capabilities in the United States and abroad to offer expedited turn around on small quantities and custom solutions. We also offer stocking agreements so when you need product quickly we can make it happen.

World-class  
manufacturing.

LINAK DESKLINE® systems have evolved over the last decades. We are always looking for ways to improve our systems and optimize production. By utilizing a semi-automatic manufacturing process we are able to keep our quality consistent with a DPPM (defective parts per million) less than 200.

### **BIFMA LEVEL 1**

LINAK has successfully completed third party audits to verify the BIFMA related point status for level one certification. Although LINAK cannot hold this status themselves (there is not currently a certification for suppliers), we can work together with OEMs and third party auditors to ensure certification of your product.

### **Reliable products**

Hundreds of customers trust their reputation to LINAK. We have the most demanding testing standards in the industry to ensure our products have a long life span.

Each LINAK leg has it's own motor for maximum performance. The engineering behind each system ensures that your system will run smoothly and not overheat.

### **UL approved**

The majority of our systems are approved to meet UL962. The approval depends on the combination of products specified so it is always best to check with your LINAK specialist.

Innovation.

Ever since the first actuator was developed, LINAK has continuously brought new and innovative ideas to the marketplace to meet our customers' needs.

Today's LINAK systems offer consistent speeds, enhanced stability (with or without a cross support), forwards/backwards compatibility and many optional upgrades. Many of which, including PVC-free and ZERO™, have been rolled out as standard to give our customers more value without additional cost.

### **New generation of control boxes**

One of our newest initiatives has been the redesign of our control box technology. We switched from large, heavy transformers to a lightweight SMPS (Switch Mode Power Supply) technology. This drastic reduction in weight (from approx. 1.6kg to 400g) reduces shipping and handling costs. Installation times are also less because these boxes can be mounted with only one screw and are much more compact.

### **Focus on design**

We introduced invisible gliding pads on columns and small steps between the profiles for better aesthetics.

### **Focus on wellness**

Our new software, Desk Control™, encourages users to stand more during the day to improve their health and productivity.

### **PIEZO™**

This hardware based anti-collision technology is more sensitive and works faster than a typical software solution. The sensor detects obstructions, then halts and reverses to avoid collision.

Sustainable.

Preserving the planet is a joint responsibility. That is why LINAK DESKLINE® takes a proactive approach to reduce the impact that the use of our products has on the environment.

### **ZERO™ technology**

All DESKLINE control boxes are designed to have an extreme low standby power consumption which means less emissions and less power used.

With the ZERO™ technology it is possible to reduce the typical standby consumption of 1-2 W to just 0.1W. This is less than a phone charger (not charging: 0.26W)\*.

### **PVC-free systems**

For health reasons and for the sake of the environment LINAK offers entire systems free of polyvinyl chloride.

### **RoHS2 compliant - banning of hazardous substances**

All LINAK products are RoHS2 compliant. The RoHS directive (Reduction of Hazardous Substances in Electrical and Electronic Equipment) requires the following substances are banned: Lead, Hexavalent Chromium (Chrome VI), Mercury, Cadmium, Polybrominated Biphenyles (PBB), Polybrominated Diphenyl Ethers (PBDE).

### **Conflict minerals**

LINAK has established a team to examine the impact of the Dodd-Frank Act. We will engage in dialogue with stakeholders to determine how LINAK can help our customers live up to their compliance obligation. We will investigate processes and solutions to enable disclosure of the origin of conflict minerals and we will be highly supportive of internationally recognized database systems providing relevant disclosure of origin.

Suited to  
your needs.

Our components can make-up to 35% of a desk and are often an exposed part of the design. LINAK products are meant to compliment the product designs that they are incorporated into, not take away from their beauty.

From the new invisible gliding pads to the minimum spacing between the column profiles, LINAK continues to work on providing a more streamlined silhouette.

We also continue to make our products more compact and offer more choices than any other supplier on the market. Your LINAK product is based on the collaboration between you and your LINAK sales team.

Our customers can choose between several shapes, features and a multitude of colors. We want our customers to find the products that best work for them and enhance their product portfolio.

## DESKLINE SYSTEMS

DESKLINE systems are true systems where everything fits – it is simply Plug & Play.

The systems are easy to integrate into any desk, counter, kitchen or workstation to create a highly adjustable ergonomic workplace that will improve both the health and productivity of the user.

### Terms of use

The user is responsible for determining the suitability of LINAK products for a specific application. LINAK takes great care in providing accurate and up-to-date information on its products. However, due to continuous development in order to improve its products, LINAK products are subject to frequent modifications and changes without prior notice. Therefore, LINAK cannot guarantee the correct and actual status of said information on its products. While LINAK uses its best efforts to fulfill orders, LINAK cannot, for the same reasons as mentioned above, guarantee the availability of any particular product. Therefore, LINAK reserves the right to discontinue the sale of any product displayed on its website or listed in its catalogs or other written material drawn up by LINAK.

All sales are subject to the Standard Terms of Sale and Delivery for LINAK. For a copy hereof, please contact LINAK.
