Artwork Layout Guide

When providing artwork to Glasshape®, please ensure you provide clear instructions on the positioning of your artwork on the finished piece of glass. If the project requires that the artwork be split up over a number of glass panels, then please provide a layout which clearly identifies each panel of glass and the corresponding section of artwork. An example of this can be seen below in the Multi Panel section of this document.

Positioning & Cropping

If your artwork is not cropped to the finished panel size, then please provide us with some indication of where the artwork is to be positioned on the glass. The illustration below provides an indication of a piece of Artwork being positioned relative to the size of the glass on which it will be printed. Please provide this keyline (Red Rectangle) on a separate layer called "Glass Outline". Please Note: Anything inside of the keyline will be printed and anything outside will not be printed.

Multi Panels

Tiling a design across multiple panels is easy with VisionInk®. Our software can manipulate the image as required to allow for joins and frames etc. If required in the future, replacement panels with a perfect match in colour and positioning can be easily supplied.

Multi Panel Layout Information

If your artwork is to be spread out over multiple panels of glass, then you will need to provide us with an accurate layout, detailing individual artwork placement, overall dimensions and panel splits relative to the placement of the complete piece of artwork. If the artwork is being assembled into a framing system and you don't want the artwork to be hidden within the framing, then we will need to be supplied the dimensions of the entire framing system. If you don't have this information, or if your artwork installation is being fitted to an existing structure, then **Glasshape** provides an additional On-site Digital Measuring Service to assist you with this.

If you need any assistance, contact the **VisionInk** Design Department. visioninkdesign@glasshape.com
