

Westfield Case Study: Westfield Approval

Project: Westfield Approve Akril

Applications: Shopfronts & Store Interiors

Akril an Australian owned and made, has been approved by Westfield Management.

Akril's modified polymer is approved as an alternative to colour back glass after demonstrating its durability and repairability while retaining its glass like appearance.

The cost saving in labour and material, with Akril's unique ability to polish back to its original state were key to its approval. Available in 10 colours and the ability to run custom colours in low volume, 5 sheet minimum, has provided designers and architects a genuine alternative to colour back glass.

Akril has completed master samples for many store designers matching corporate colours for client approval.

Brilliant.
