Greywater Recycle Flow

About the System

The latest technology in greywater recycling with a new age slimline treatment unit from Nubian Water Systems. The system can be installed beside your house, requiring no excavation or disruption to your garden. It is as easy to install as a hotwater system or other household appliance.

The system is housed in three lightweight, slimline units:

Meets the wheelbarrow test!
Fits down the side of your house.
Australian Made

Three Stage Process

- 1 Separation of lint and other coarse materials to prevent blockages and fouling of the system.
- 2 Water flows through a bed of proprietary media in the Processor. Contaminant removal is achieved through filtration, adsorption and biological treatment.
- 3 Ultraviolet (UV) disinfection completes the treatment process before water is stored for recycling.

Installation

- Plumbing from your toilets and kitchen must be separated from your greywater plumbing
- The tanks can be installed internally or externally
- Access and clearance requirements subject to site inspection
- Installation can be completed in less than a day
- All work is to be carried out by a licensed plumber
- Full package available including greywater sump and pump and recycled water pump

Local Authority approval is required prior to installing any on-site wastewater treatment. The NUBIAN GT600 is fully accredited in Australia.

Our authorised representatives and fully trained staff can answer any questions and provide information to help you and your Local Authority.
