## ALUMATE CLADDING-SHAPED INSTALLATION

---

Alumate Cladding features an interlocking tongue and groove design to achieve concealed fixings while providing a conventional timber appearance with a clean and durable finish. Defined uniform shadow lines between the boards become architectural features when the boards are installed either horizontally or vertically.

Alumate cladding comes in 15mm thick boards with a special 'V' shaped tongue and groove shadow line joint rebates. Alumate cladding boards overlap one another, concealing the fixing and locking in the boards to give a clean finish with effective board coverage of 165mm, with the optional virtual 'V' joint of the ALC16515V giving the appearance of a 83mm board.
