

FYTOGREEN'S

Green Façade System

KEY BENEFITS OF A GREEN FAÇADE

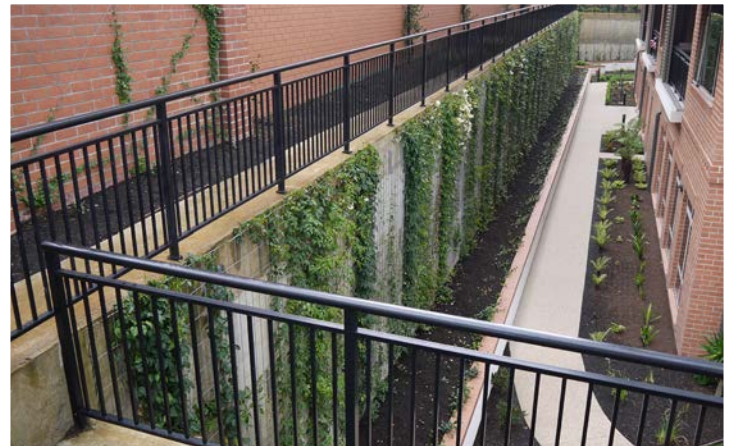

Reduce Building A/C Energy Costs

Reduce reflective Light & Heat

Cost Effective

Minimal Equipment Access Requirements

Fytogreen creates beautiful external green facades using web mesh, cables and square mesh to train climbing plants and shrubs to cover buildings and walls.

Pictured: Ryman Health Care, Wheelers Hill, Vic.

These popular lightweight green facades offer benefits for amenity and thermal influence ...they can reduce building temperatures and air-conditioning costs, reduce reflective light and heat and offer acoustic insulation while producing oxygen and absorbing Co2.

Fytogreen's green facades continue to grow and the changing floral and decorative effects delight and inspire people.
