

SNAP LOCK

ALUMINIUM

Year completed: 2010

Architect: Jared Poole Design

Size: 1200 m²

Custom Creations

Several roofing options had been presented to the client. Together with Jared Pool Design they took time to consider the best fit for the residence.

We recommended high quality snap lock panels and were chosen to proceed based on the outstanding aesthetics of our solution.

It was paramount to the client that they develop the house to extremely high standards using materials of impeccable quality.

Proven profiles, precious metals

Working with aluminium we created the roof, gutter and downpipes to achieve the crisp look required by our client without the worry of any unsightly oil canning in the panels.

We chose a matt grey finish in order to keep the palate neutral, fully complementing the residence's external timber works.

Lifelong value

The residence's roof has been built to exemplary specifications with superior materials of lifelong quality.
