Internal & external walls, party walls & stair cores

The builder of the Gracetown project specified that **all load-bearing and external walls had to be afs logicwall® as the speed of construction on other projects using logicwall® was outstanding.**

Chief among the benefits of using logicwall® are the solid concrete walls and acoustic performance—essential for party walls between townhouses. And this solidity (with its resultant security and longevity) offers a substantial advantage over

neighbouring townhouses and their light-weight plasterboard walls.

Importantly, logicwall® panel thicknesses maximised liveable space and everyone's peace of mind was assured with CodeMark certification and AS3600 compliance.

Installation was another area where logicwall® excelled: **just three months to install 13,706m² of logicwall® (October 2017 to mid-January 2018).**

Talk to our inhouse engineers about why using afs logicwall® in your next project is a smarter, faster, better choice:
