

Cyclone Yasi put Altair™ Louvres to the test

**CYCLONE
RATED**

Breezway Altair™ Louvre Windows are the highest performing, cyclone rated louvres in their class. Made from non-corrosive materials, Altair™ Louvre Windows have been designed to withstand the harshest weather conditions such as Category 5 Cyclone Yasi.

“ We have used the Breezway louvre system in several of our new houses, and are very impressed with their performance during the Cat 5 Cyclone Yasi. If you're thinking of building or renovating I would highly recommend Breezway Altair™ Louvres on your next project. ”

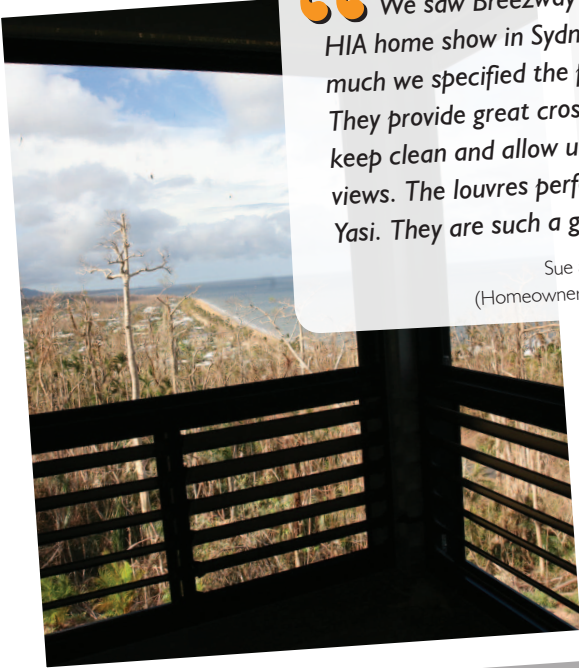

Mark Watson (Builder & Owner Mark Watson Constructions Pty Ltd, Mission Beach)

“ Although Cyclone Yasi destroyed parts of my house, it was a good test for the Altair™ Louvres. They should have leaked by rights but in this case worked really well. ”

John Arrowsmith
(Homeowner, Mission Beach)

breezway™

“ We saw Breezway Altair™ Louvres at the HIA home show in Sydney and liked them so much we specified the product to our designer. They provide great cross ventilation, are easy to keep clean and allow us to enjoy beautiful ocean views. The louvres performed well during Cyclone Yasi. They are such a great product. ”

Sue and Neville Brow
(Homeowners, Mission Beach)

“ I incorporated Altair™ Louvres into the design of our house for their natural ventilation and performance. The water was hitting the windows horizontally (like a sheet of water up against the blades) during Cyclone Yasi but I am very impressed with how well the louvres held up. ”

David Skinner (Builder, Townsville)

Breezway Altair™ Louvre Windows provide the following benefits:

- Made entirely from corrosion resistant aluminium, stainless steel and industrial strength plastics for strength and long life durability.
- Designed to exceed the requirements of AS2047-1999 'Windows in Buildings' to ensure the best performance possible from a louvre window.
- Offer great energy benefits with blades that open almost horizontal to maximise natural light and ventilation (reducing the need for air conditioning).
- Provides the tightest sealing in their class to withstand positive and negative wind pressures such as those experienced during Cyclone Yasi.
- Widest choice of customising options to suit all needs and climatic conditions around Australia.
