INTRODUCING TRULY UNIQUE

FACADES

No doubt your facade is a key area of focus to make your project stand apart. Arcadia has a great wealth of knowledge you can access at no cost, to assist in developing a customised and truly unique facade, which meets the performance requirements for Fire, Wind and Thermal Movement.

ARCADIA PROVIDES END TO END SUPPORT

PROJECT Ritz Carlton Hotel
ARCHITECT Cottee Parker Architects
BUILDER Probuild

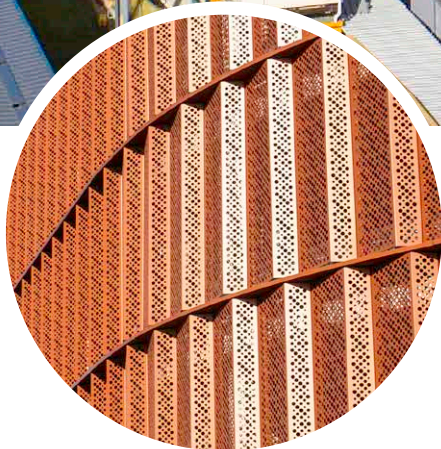

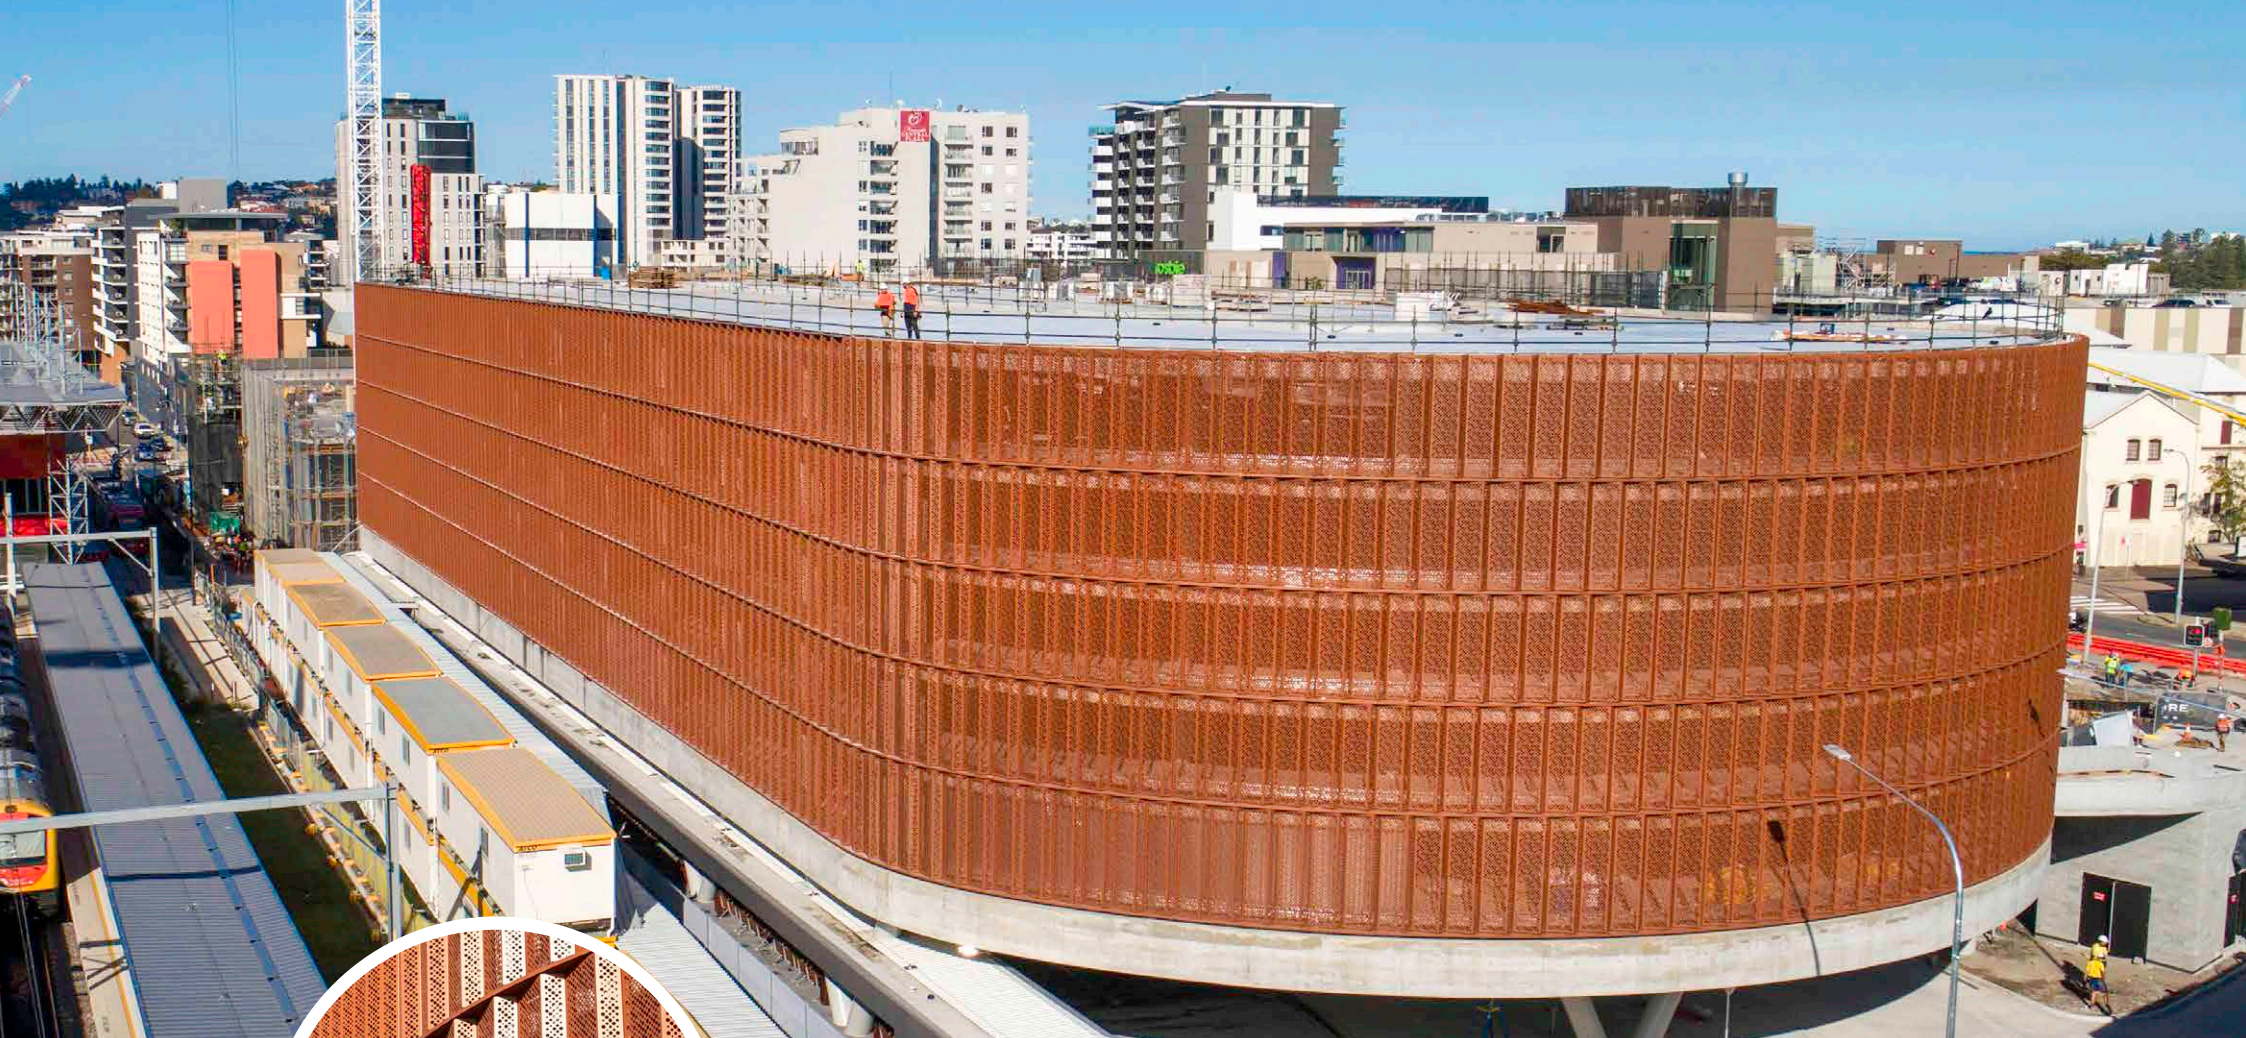

The custom cobble effect in this design was an important piece of the building's architecture and required over 7500 individual panels with a range of differing powder coat colours, angles and depths. Whilst looking striking, the facade element was required to provide the necessary natural ventilation for the car park beyond the facade.

PROJECT Bankstown RSL
ARCHITECT Altis Architecture
BUILDER Infinity

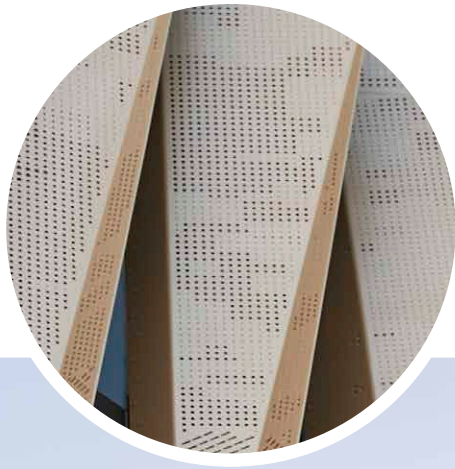

These customised stick facade elements create a stunning vertical feature. Every stick has a unique profile and differing colours with a bespoke fixing system which interfaces with the building facade.

PROJECT The Store
ARCHITECT Bates Smart
BUILDER Bloc

This monumental car park facade in the centre of Newcastle NSW spans over 6 floors high and incorporates over 3500m² of facade. Arcadia worked closely with the architecture and construction team to manage and design the bespoke facade system which when placed side by side these stylised mesh panels create an elegant concertina effect. The powder coat colour featured in this project is Interpon Ordos Sable.

PROJECT Bob Hawke College
ARCHITECTS Bateman Architects
T&Z Architects
BUILDER Pact Construction

Arcadia worked closely with artists and architects to create a bespoke solution incorporating custom perforated fins, each with differing patterns and folds to create specialist image and text visuals across the building.

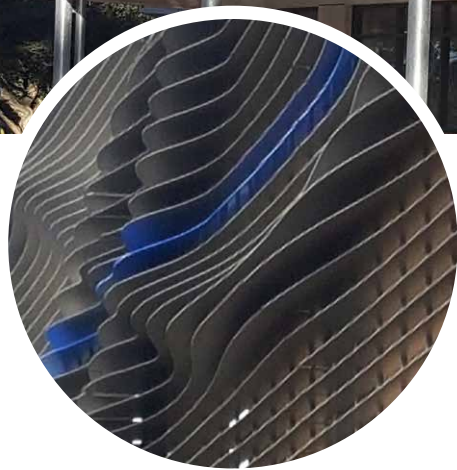

PROJECT John Willcock College
ARCHITECT Eastman Poletti
BUILDER Crothers Construction

Arcadia worked closely with the architecture and artist team on this college to provide a unique solution and deliver over 600m² of custom and stylised mesh panels with every panel having a different shape, size, pattern and colour. The bright Dulux powder coat colours, work together to create a bold statement.

PROJECT SwanCare Aged Care
ARCHITECT Iredale Pederson Hook
BUILDER Adco Construction

With some challenging engineering and loading requirements, Arcadia was able to provide a simple but effective car park facade using a mesh system which is an ideal structure for climbing plants - the perfect combination of nature and steel. The design has a curved face with 3 bands of powder coat colours that compliment its surroundings. This project uses an integrated crash barrier system.

PROJECT Margaret River High School
ARCHITECT With_Architecture Studio
BUILDER Perkins Builders

This impressive wave effect uses Arcadia's Match® Sunscreen Grating System, made from anodised aluminium. Each flat bar has a wave pattern which has been individually profiled and swaged together to create an immense wave screen effect.

PROJECT Shoalhaven Hospital
ARCHITECT MAPP Architects
BUILDER Project Coordination

A custom facade solution for the Shoalhaven car park facade which includes a range of differing colours and vertical feature fins which creates a striking look. Arcadia provided a complete facade solution which included an integrated safety crash barrier rail system.
