

ACCESS RAMPS

All venues and facilities are required by law to provide patrons with a safe and compliant access ramp system. This includes schools, universities, retirement villages, hospitality venues, corporate workplaces, shopping centres, theatres, museums and more.

The core strength of the Select Staging Concepts access ramp is the premium plywood podium coupled with the unique aluminium extrusion, which ensures that all custom-built access ramps are safe, strong and secure. Every ramp is specially designed to deliver a tailored solution for each client and comply with the stringent Australian Standards AS 1428.1 requirements for access ramps and landings in a 1:14 gradient.

Our modular access ramp system provides all the requisite safety features including:

- Safety handrails on both sides of the ramp
- Kick plates, mid-point, corner and top landings if required
- A strong ramp starter with non-slip fixings
- A choice of non-slip marine grade carpet or timber stain finishes
- AS1428.1 compliant rail and podium joiners.

The modular access ramp system can be installed as a permanent fixture, or as a versatile portable solution which can be assembled and dismantled by only two people and safely stored on our storage trolley kit when not in use.

Today, new and existing stages and platforms are required to provide safe and compliant facility access for those with a disability or reduced mobility. All our access ramps are made in Australia and comply with the Australian Standards AS1428.1.

Our innovative modular access ramp solution can be paired with any of our staging systems, or we can retrofit our compliant access ramps to any existing stage or platform.
