Taurean® ThermaTaur®

*R-value is calculated specifically for the colder climates and offers the best long term insulating value.

**NEW THERMATAUR®
INSULATED PANEL DOOR
ADD MORE THAN JUST
STYLE TO YOUR HOME**

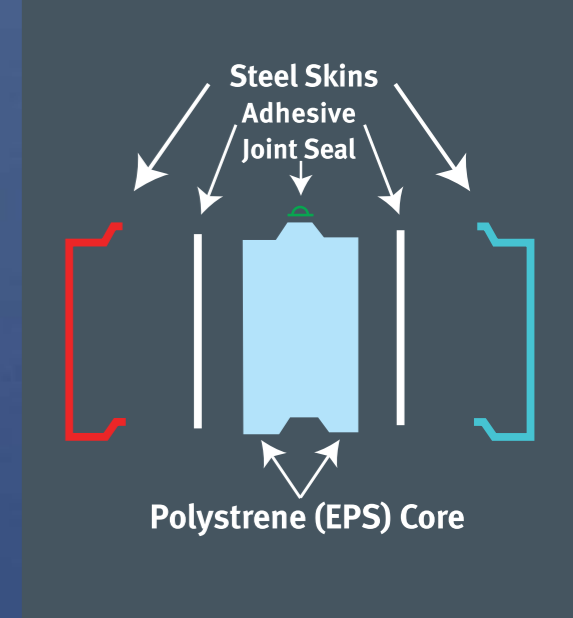

ThermaTaur® Collection

The premium ThermaTaur® insulated panel door uses a common sense approach to provide the best solution for your home.

ThermaTaur® doors are manufactured by Northwest Door in the USA and customised locally for individual job requirements.

The NWD construction, using the 'sandwich' method combines two layers of high quality steel skin and a solid expanded polystyrene (EPS) core that forms a true thermal break.

This thermal break offers real protection against the weather, both hot and cold, and limiting any temperature transference in or out.

Taurean® Door Systems is strong in history

Taurean® Door Systems is part of the Fletcher Building Group and has grown from two great Australian companies, Stramit® and Creeks. So our customers can be reassured that the products they buy are backed by many years of proven performance. Today our key values that drive us forward are the same as they have always been; **innovation, reliability, security** and **safety**.

ThermaTaur® Insulated Panel Doors. Unsurpassed quality and oh so quiet!

- Style** Smooth woodgrain embossed look or the grooved embossed look.
- Quiet** Sound dampening qualities keep street noise out while keeping noise from within the home, inside.
- Strength** Resistant to dents thanks to three integrated layers fused together as one
- Design** A thermal break stops thermal transfer from the outside to the inside of the door ensuring maximum performance.
- R-value** Thermal construction provides cooler/warmer garage area.
- Safety** Safety edging on the tracks gives peace of mind.

Warranty

ThermaTaur® panels come with a warranty for deterioration due to perforation from corrosion, 20 year warranty against deterioration of insulation efficiency (thermal drift) and a 5 year warranty against delamination. The hardware, fittings and/or accessories have a 1 year manufacturing warranty.

NOTE: any painting of the doors by third parties is not warranted by Taurean Door Systems.

Taurean® ThermaTaur® Panels. The look others will envy!

Smooth and Quiet

The panel density assists in keeping sound in and out.

Safety

ThermaTaur® tracks have safety edges to minimise accidents. So in terms of safety they are the best in Australia. No sharp edges on the panels, styles or hinges, ensuring safety for your family.

Long Life

Of course the life of your door is all important so galvanised brackets, tracks and most importantly, the panels, protect against corrosion. The EPS is a closed cell type insulation which does not degrade like other insulation types, particularly polyurethane, which is commonly used by other manufacturers.

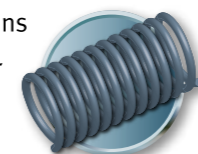

Thermal Break

The ThermaTaur® inner and outer skins do not touch and so do not transfer the heat or cold from outer skin

to inner skin, which forms a natural thermal break. The weather joint or seal between panels helps to prevent air infiltration, heat loss or gain on either side of the door. Again the thermal break provides your home with protection from the weather and allows full use of the garage throughout the year.

Automation

Taurean ThermaTaur® insulated doors are most commonly opened and closed by automation. Taurean Door Systems has an extensive range of automatic openers that will complete your door package and make life so much easier. Visit the Taurean Door Systems website www.taureands.com.au for more details or call us to find out about our ThermaTaur® door and motor packages.
