

Would your decking meet BAL-40? ModWood Flame Shield® Would!

- Want a traditional decking look and feel in a bushfire attack level (BAL) 40 rating, now you can!
- Deep embossed pattern improves slip resistance, manufactured to R11
- Durability with low maintenance
- Australian designed, manufactured and tested

MODWOOD

decking

Bushfires are part of Australia's environment. Enjoying the use of a deck is a central part of Australia's lifestyle. Until now, the options available for decking boards suited to bushfire prone areas rated at BAL-40 have been very limited. However, this has all changed!

Flame Shield,[®] the latest addition to the ModWood product range, is certified to AS1530.8.1-2007 with a BAL-40 rating. **Flame Shield**[®] can be used in bushfire prone areas that have a bushfire attack level (BAL) up to and including BAL-40 (AS3959-2009). Available in 137mm x 23mm profile in a range of colours.

Flame Shield[®] certification allows for the subfloor space to be either enclosed* or unenclosed. The sub-frame joists and bearers need to be from non-combustible materials or one of the bushfire-resisting timbers (refer to AS3959-2009 Appendix F). With this construction system, **Flame Shield**[®] has been tested and certified to comply with AS1530.8.1.

Flame Shield[®] is manufactured with a deep embossed pattern for improved slip resistance and achieves R11 (AS/NZS 4586-2004).

ModWood **Flame Shield**[®] boards are designed and manufactured in Australia to meet local conditions. **Flame Shield**[®] is specially formulated wood composite decking that has a rating of BAL-40. Choose and use with confidence, knowing that **Flame Shield**[®] has been designed for the harsh Australian environment.
