our history

Greene Fire started as Coopers Fire, introducing fire curtains and smoke curtains to Australia in the late 1990s. We provide performance solutions for the Australian and New Zealand building and construction markets.

Being an extremely specialist company operating with niche products, we grew slowly, originally in Perth and then from Sydney since 2007.

In 2008 we commenced local manufacture of fire curtains and smoke curtains starting with the head boxes for the Sky Vue and One Shelley Street projects. This has helped to grow acceptance of fire curtains by local fire engineers and fire brigade.

Opportunity arose in 2014 to diversify our product range and we chose to stick with niche, bespoke and uncommon product solutions. We have partnered with some of the most innovative manufacturers around the world as well as developed our own unique solutions.

Greene Fire is 100% Australian owned since 2015.

delivering engineered solutions

Greene Fire is a family owned and operated business. We pioneered fire and smoke curtains within Australia and more recently our capability in delivering engineered solutions has expanded to offer fire shutters, fire rated glazing and smoke ventilation, along with several non-fire rated solutions.

We are excited about building innovation and assisting designers in achieving their goals for their development by improving on life safety, building comfort and value. Our range of products, service and expertise is constantly growing as we strive to provide best value for our customers.

I am proud that we have helped to protect more than 500 buildings across Australia and New Zealand.

Clinton Greene
Director

why to choose us

Greene Fire employs a diverse range of employees with the required skills and expertise to deliver custom engineered solutions. Our staff are actively involved in the fire protection industry at Fire Protection Association (FPAA) technical advisory committees, Standards Australia and ISO committees for Fire Safety standards.

It is our belief that we must understand the complete requirements for the project to ensure that we deliver a quality, tested and certified solution. We are not here to just sell product. We aim to educate, deliver and maintain the products and solutions that we offer.

We have an extensive range of products and services that are complimentary to each other, allowing us to package them together to provide complete solutions for your project.

Our integrated management system including health and safety, the environment and quality is third party certified by BSI for manufacture, supply, installation and maintenance of our products.

service and maintenance

When you choose Greene Fire to be your service and maintenance partner, you are supported by a network of fully trained technicians that operate Australia wide.

Our technicians carry standard parts with them in their service vehicles for prompt attention to maintenance and repairs with spare parts stocked in Sydney should you have a major breakdown. No other supplier of fire and smoke curtains offers such comprehensive access to spare parts.

All service is performed in accordance with the requirements of AS1851 and manufacturer's recommendations. Greene Fire will ensure that your building assets are functioning when needed and maintain records for your compliance.

range of products

fire curtains and smoke curtains

The market leading range of high performance fire and smoke curtains. Available in horizontal or vertical configurations to suit almost any building requirement. Concertina fire curtains to protect voids without needing side guides.

fire glass

Glazed walls, skylights, façades, windows and doors. A fire rated glass solution with either insulated or non-insulated performance. Frames are available in timber, steel, frameless or even aluminium! Full height frameless glass walls can be offered.

fire shutters

Specialising in Wide Span Opening Protectives, we can protect very large openings with high fire, acoustic and insulation performance. Models are available to meet any design challenge with vertical, side or horizontal operation. A unique system incorporating egress compliant fire doors.

glass smoke baffles

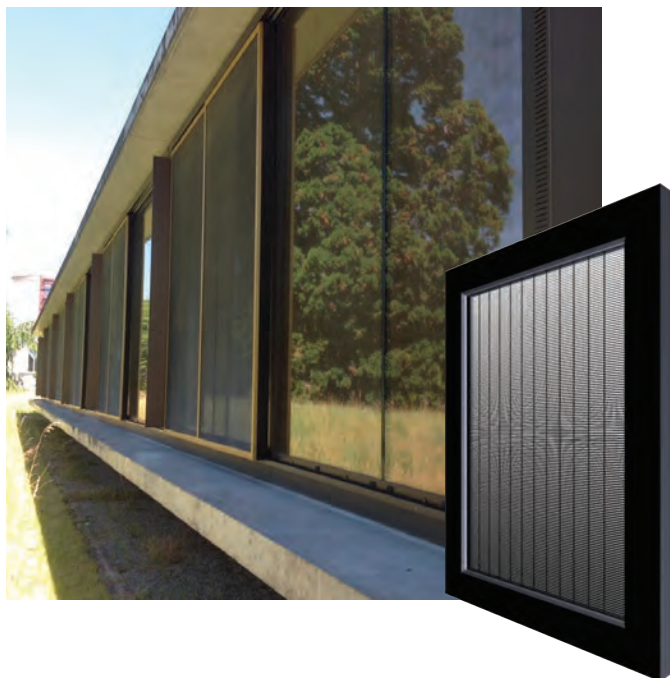

Where glass smoke baffles are required in the design, we can provide the most cost effective, clear and unobtrusive solution. Our design is elegant and simple.

range of products

microlouvre™

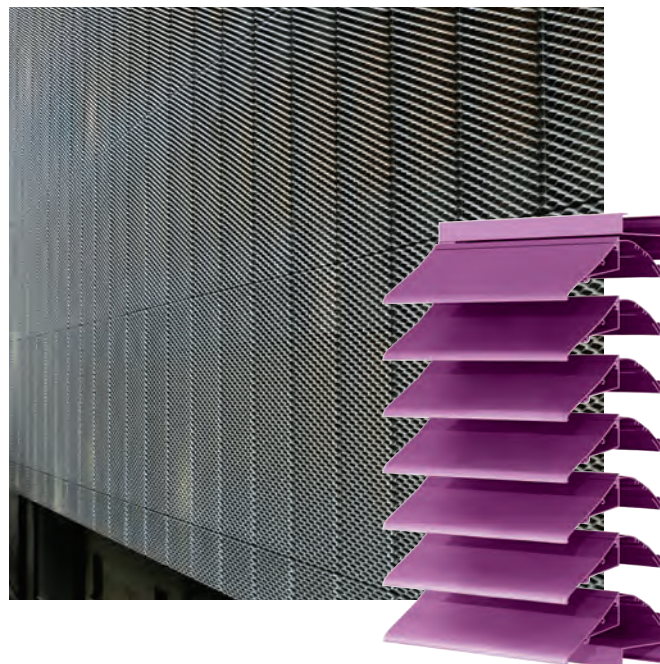

MicroLouvre™ provides solar shading and glare control for building windows. At only 1.2mm thick it is the most effective, almost invisible solar shading product available. The screens are also fire tested for use as attenuation screens or bush fire screens to protect windows and property boundary walls.

louvre windows

Single, double and triple glazed louvre windows including new top hung double glazed window by Hahn. Outstanding design and performance to meet stringent aesthetic, ventilation, weather and acoustic requirements. Fully automatic and motorised or manual operation.

performance louvres

Vital Louvre Series allow louvres to be concealed with numerous attractive mesh options to complement or match the building façade. Performance louvres provide ventilation and a high level of rain defence to protect building plant and equipment. We also offer a complete range of acoustic and solar shading louvres.

ventilation

Natural ventilation is the best way to cool a structure providing low maintenance and running costs. Greene Fire provides a complete range of roof or wall ventilators including fully certified smoke ventilation products.

range of products

total door

Why specify a fire door when you can get a Total Door™? A fully integrated door system with concealed fixing full height hinge assembly and full height latching. With fewer moving parts, Total Door™ is tested for more than 5 million cycles. Reducing installation time, maintenance costs and providing unbeatable reliability and unmatched security.

high wind performance shutters

Looking for cyclone proof shutters. We have tested performance up to 455km/hr winds. Protecting life in public areas such as schools. We can also offer operable performance with wind speeds up to 180km/hr where guaranteed entry and exit from the building is required – such as SES or fire brigade.

service and security grilles

Non-fire rated door, shutters and grilles for almost any application. Incorporating swing service doors in the operable shutters makes these service and security grilles easily accessible and secure. High cycle, reliable operation and wide spans is what we specialise in.

architectural steel windows and doors

Custom made and bespoke windows and doors providing seamless integration into new designs, or match with existing heritage requirements.
