WHY STARON®?

Staron® is a technologically advanced product manufactured from a natural mineral refined from bauxite and blended with pure acrylic resin.

Staron's® solid homogeneous surface will not support bacteria or mildew growth. In fact it meets the NSF-51 National Sanitation Accreditation for safe food hygiene. Furthermore, fused inconspicuous seamless joins eliminate crevices for dirt or bacteria to harbour or even moisture to damage. Even odours will not absorb onto Staron®.

Staron® is a non-porous, stain resistant surface that is easy to keep clean. Whether preparing fish, red meat or delicate pastry, Staron® offers a unique hygienic worktop for food preparation that will clean up with ease. Staron® can be cleaned up immediately with soap and water, while stubborn marks which have been allowed to set (even cigarette burns) can be scrubbed off using a common abrasive household cleaner.

Guaranteed to last

Staron® is designed to last and is backed by Samsung's 10-year installed, transferable limited warranty when installed by our certified trained fabricators.

A Practical Solution

While most people initially choose Staron® for its visual appeal, they are soon equally excited by its practicality and easy maintenance. Once you compare Staron's® benefits to other countertop materials the choice is easy!

Solid: A range of ideal residential benchtop colours as well as some strong unique commercial designs.

* Commercial Designs
 ** Cumulus is a highly translucent design

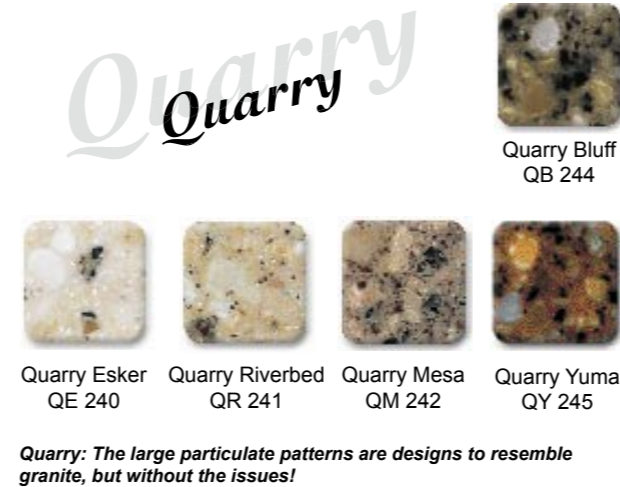

Sanded: Small, sand sized particles are blended to create a consistent even texture.

Aspen: Colours that are created from quartz-like appearance particles.

Pebble: Both large and small particles are combined to create a stone impression.

Quarry: The large particulate patterns are designs to resemble granite, but without the issues!

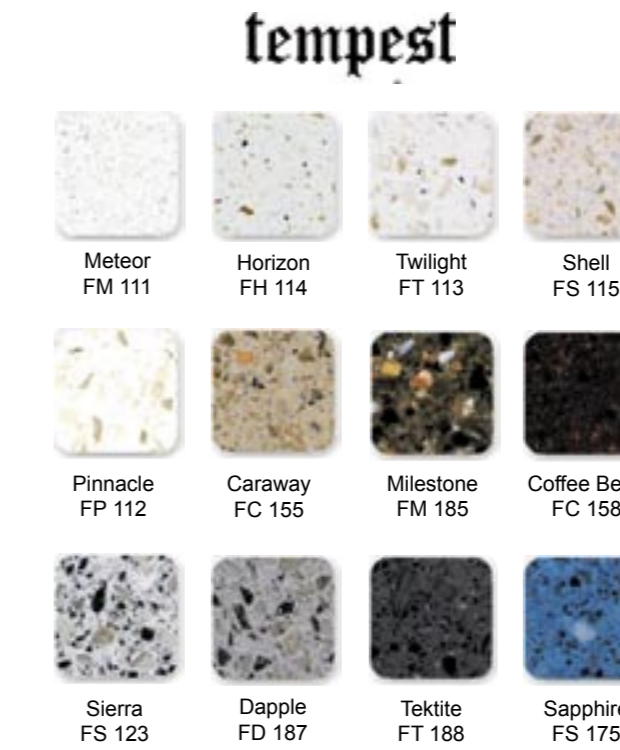

Talus: Slightly translucent colours are combined with crystal flecks in various particles sizes.

Breccia: Our newest series. Both dark and translucent particles combine to create a beautiful mosaic pattern.

Metallic: Crystal flecks create impressive looks.

Tempest: Clear chips giving design depth.

Tempest Stylist: New technology with clear chips and traces of silver, gold and copper.

Tempest by Staron® Surfaces is a solid alternative specifically designed with a look that rivals stone and quartz. Yet it offers all the features and benefits that designers and end-users demand of solid surface, including a seamless appearance and nonporous, hygienic properties. The visual difference is in Tempest's larger, clear particulate, which gives the material an amazing depth not seen before in solid surface. This combination of a quartz appearance and solid surface practicality makes Tempest the ideal surface for any commercial or residential application.
