

LIFESTYLE SERIES

LIBERTY

1

The **LIBERTY** residential lift is manufactured in Australia and has great appeal to Architects, Designers, Builders and Home Owners.

With most of us leading increasingly busy lives, the **LIBERTY** offers time saving access in multi level homes, and people of all ages can see the advantages of having a **LIBERTY** lift installed in their home.

The **LIBERTY** offers a quick and easy transfer between levels for carrying groceries, laundry, kids gear, suitcases and numerous other items, as well as for you and your visitors!

Some reasons why home owners are installing the **LIBERTY**:

- The **LIBERTY** is an investment that adds value to your home.
- Quick easy installation means minimal disruption to your home.
- The **LIBERTY** does not require as much space as other lifts.
- Competitively priced and great value for money.
- Traction Drive: Geared roller chain suspension with a counterweight for a smoother, more comfortable, safer ride.
- Low maintenance costs.
- 240 volt single phase power only.

Need a lift?

Here's what you need to know.

Master Lifts has been serving Australian Architects, Designers, Builders and Home Owners for over eighteen years. Our goal is to provide cost effective quality lift systems. We programme carefully and deliver on time.

LIBERTY

2

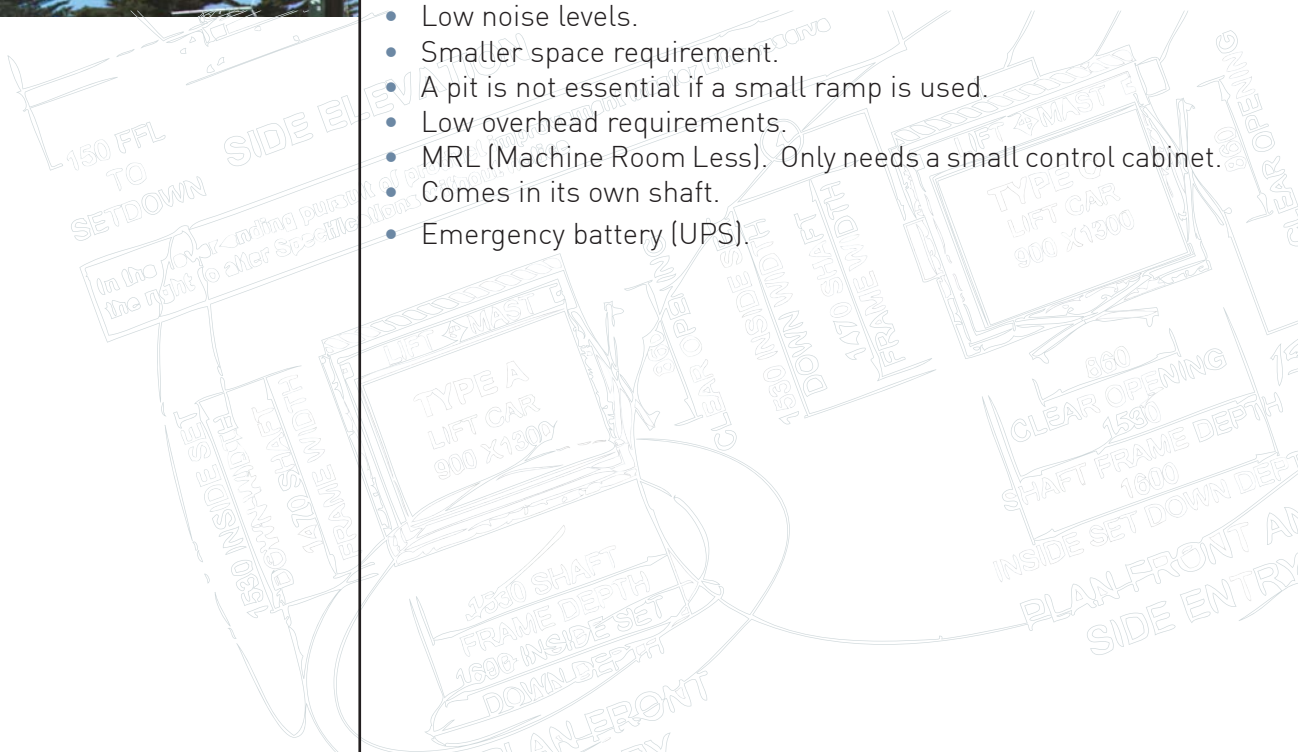

BENEFITS

- A soft start and a soft stop. This gives you a smoother ride, a refinement usually only found in more expensive lifts.
- Smaller space requirement. Because the **LIBERTY** comes in its own aluminium shaft it offers a big space saving compared to conventional lifts which usually need a structural block wall shaft.
- There is no requirement for a separate machine room – just a small cabinet similar to a meter box. Another space saving feature!
- Easy installation into a new building as it has its own shaft. The special design also makes for easy retrofitting into an existing building and saves you money.
- Emergency battery (UPS) lowering of the car in the event of household power failure. You will not get stuck in your lift during a power outage.
- A digital position indicator display in the car operating panel that shows you which level you are on.

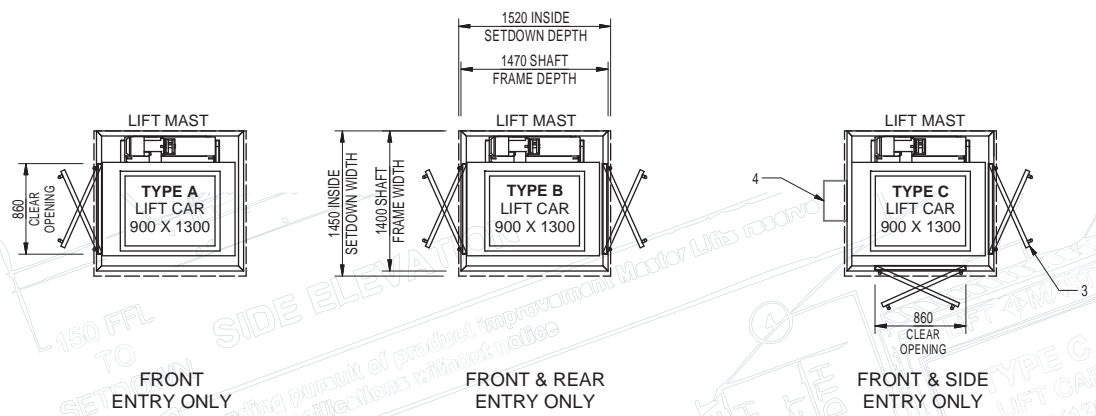

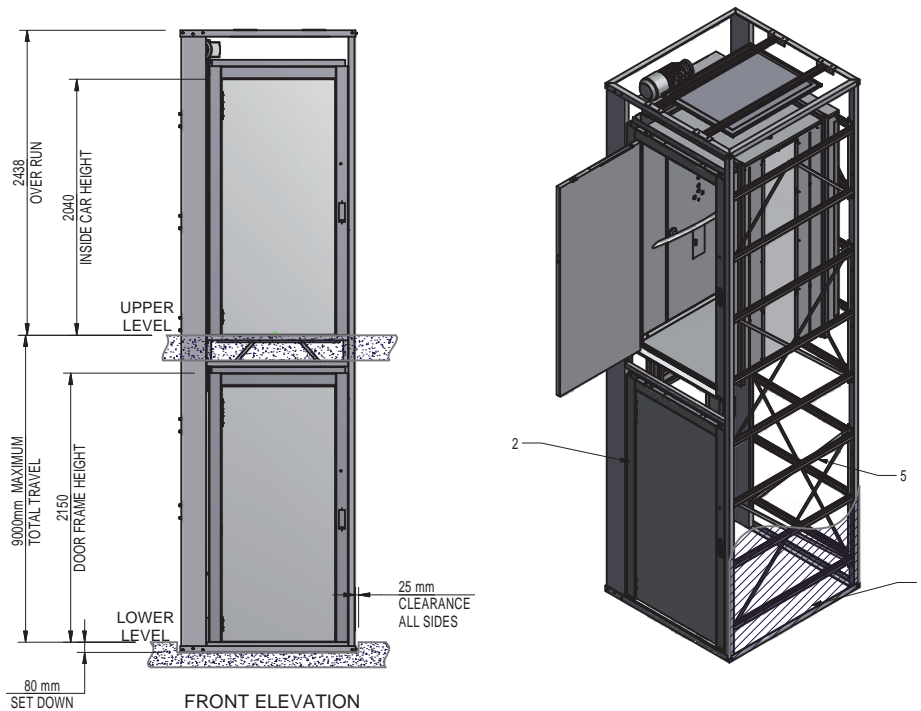

FEATURES:

- Fully automatic operation.
- Travel of up to 9 metres.
- Up to 4 stops.
- Soft start / soft stop.
- Speed of 0.25m/sec.
- Low noise levels.
- Smaller space requirement.
- A pit is not essential if a small ramp is used.
- Low overhead requirements.
- MRL (Machine Room Less). Only needs a small control cabinet.
- Comes in its own shaft.
- Emergency battery (UPS).

LIBERTY
