A solution to problem floors

Quicker installation and decreased downtime

Looselay. Making difficult, easy.

About Looselay Designflooring

Suited to both residential and commercial applications, Looselay is our latest addition to our line of Designflooring products. Available in 6 plank colours, Looselay features an innovative acoustic backing system which eliminates the need for click-locking and allows the weight and friction backing of the flooring system to secure the floor in place on the substrate below.

Taking inspiration from the widely held appeal of free lay modular carpet, Looselay floors are engineered to lay flat and you'll find there is no need for rolling during or after installation. In addition, the design of the flooring system simplifies repairs — if a plank is damaged, a new section of Looselay can be easily dropped into place. Looselay flooring is also 100% recyclable.

Advantages of Looselay

- Superb acoustic properties that exceeds the high rise acoustic requirements of the BCA without need for acoustic underlay
- Superior dimensional stability means that it can be installed over most existing hard floors and difficult substrates which will help reduce project costs*
- 100% recyclable and significant life cycle cost savings
- Ability to easily re-fit products or adjust single planks after installation unlike click or overlap LVT alternatives
- Flexible unique design backing requires either no or minimum adhesive which means decreased downtime and quicker installation*
