New fusion doors from Woodworkers

THE fusion range of contemporary doors introduced by The Woodworkers Company excitingly blends timber and metal into a stunning range of new designs.

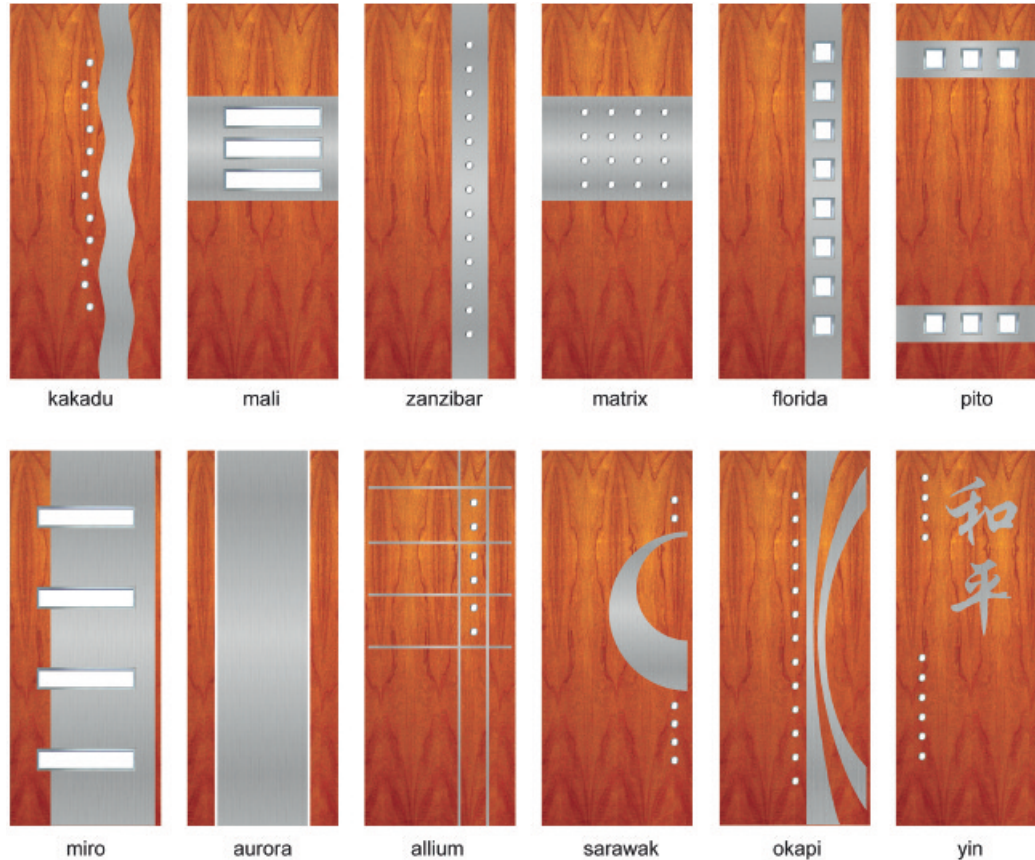

“People are looking for designs that make a statement,” says Woodworker’s director and architect, John Coates.

The range is manufactured in Australia and available in a wide range of timber options and metallic finishes. The range provides unprecedented flexibility to customise designs for particular applications and vary sizes for pivoting or hinged installations.

The unique stainless glazing surrounds designed by Woodworkers allow any variety of glass to be selected.

“Until now you couldn’t explore metal and timber blend doors if you wanted natural light in your entry,” continues John Coates, “but the combination of state of the art machining and new materials creates a whole new world of possibilities.”
