MOD-105

Simply The Best

Barben Industries has defied manufacturing trends and continues to produce an all Australian manufactured and designed range of stainless steel and timber entry door handles from its Queensland factory.

Major investments in state of the art machinery and tooling have ensured the Barben range of handles remain "simply the best" Australian made range of entry door handles available on the market.

Each individual handle is made to order so you can be assured that any specific requests can be met including special manufacture designs.

The latest introduction to the ever increasing range is the new timber entry door handles. The subtle combination of Australian recycled timbers and stainless steel components create a warm inviting handle that is suitable for all applications.

One of the main attractions to designers and architects to the new range is the vast array of finishes that can be delivered to suit their individual projects. Whether it is a Black Japan, American White Oak or any of the standard finishes the timber component can in most cases be stained to suit almost any timber veneer or flooring finish.

The stainless steel handles are manufactured using the highest quality raw materials and can be manufactured in either 304 or 316 grade material.

Barben Industries also boasts the most comprehensive design collection so whether it is an internal or external toughened glass, timber or Aluminium frame door there is a design that will suit your application.
