

SUPAWOOD's new concept in air conditioning ceilings

SUPAEXPANCE
Climaclick from Extenzo

SUPAEXPANCE CLIMACLICK air conditioning ceiling system is an innovative climate control option within Supawood's new range of taut ceiling products from Extenzo.

SupaExpanse Climaclick ensures a perfectly even temperature distribution throughout the entire room without any perceptible feelings of draft. This not only greatly improves the comfort of the users of the space but can produce energy savings of up to 10%.

SupaExpanse Climaclick enables clear ceilings by eliminating the need for ducts and grills. An added advantage is smaller ceiling cavities as there is no need for duct work. This enables ceiling heights to be maintained or increased in refits. More importantly less height is required per floor allowing for more leasable floors in new multi storey developments.
