

Economical noise control solution

Supawood's Noise Control Kits are the ideal economical solution for noise reduction. These individual, floating pre-finished acoustic panels are designed to fit between existing fixtures and to be installed over other wall or ceiling surfaces such as plasterboard or cement render.

Using Supawood's quality mounting systems these panels are so simple and quick to install that any carpenter, maintenance person or DIY enthusiast can handle the job. Each panel is self sufficient, so installation can be done progressively over time.

The panels come standard in an attractive Australian Hoop Pine finish but are also available in other custom finishes and in a Fire Group 1 option. With four standard sizes (2390x1190, 1790x1190, 1190x1190 & 2390x590) there is no need for careful measuring making them a flexible option to suit any site conditions.
