Building the Education Revolution with GE

The National Building Economic Stimulus Plan was released on the 3rd February 2009. This is the centrepiece of the government's response to the global economic downturn. By providing infrastructure funding, all Australian schools have the opportunity to meet the needs of the 21st century.

The Building the Education Revolution (BER) program is part of this plan and will fund building and upgrades to school facilities which in turn will benefit the broader community. Some of these projects include libraries, multi-purpose halls, secondary school science laboratories, and language learning centres.

The Australian Government will invest a further \$14.7 billion to boost the Education Revolution over the next three years. This critical component of the Government's economic stimulus package, gives our schools the attention they so richly deserve.

If your future projects include new or refurbished:

- Classrooms.
- Canteens and assembly areas.
- Drinking fountain areas.
- Science laboratories.
- School ablution facilities.
- Flooring, including courtyard and external paving areas.

Then you can rely on GE's range of school tapware and drainage products.

These products are designed to be robust, long lasting and ideal for the heavy workloads seen in schools, universities, institutions and public facilities.

Some key features of our tapware include:

- Tough vandal resistant designs ideal for public areas.
- Australian made and approved to AS/NZS 3718.
- WELS rated to 5 and 6 stars for maximum water efficiency and compliance with green building codes.
- Heavy duty, long-lasting chrome plated finish.
- Selected ranges of tapware units are approved to the Schools Facilities Standard (SFS) Specification by the NSW Department of Commerce.
- The option of chemical resistant epoxy coating.
- Special units can be made to your specifications.

State government departments, including the NSW Government, have worked together with Galvin Engineering for many years, to supply numerous schools with top quality commercial tapware and drains.
