Your local Floorsafe supplier:

SLIPPERY TILES MADE SAFE

Many thousands of people are injured every year from slip & fall accidents on wet slippery floors.

So the answer to reducing the risk of a slip/fall accident is to use Floorsafe, a proven, quality and reliable product for over 20 years.

The Floorsafe anti-slip system treatment will provide outstanding underfoot safety on all slippery surfaces such as: ceramic, quarry and mosaic tiles, granite, porcelain, terrazzo and concrete surfaces.

Kitchens, Bathrooms, Showers, Laundries, Pools, Patios, Steps... in fact anywhere where a floor surface is a slip hazard especially when wet – inside or outside - domestic or commercial.

Floorsafe is not new, it's been making slippery surfaces anti-slip safe since 1987. Floorsafe's unique three and 4-step anti-slip system is currently being installed for many state and local Government Departments, Disability Services, Community Housing, Health and Aged Care organisations, Hospitals, Nursing Homes, Hostels, Retirement Homes and many other industries throughout Australia.

How does Floorsafe make a slippery ceramic or quarry tile anti-slip safe?

A passive change to a tile surface is chemically created by one of the three Floorsafe liquid products used in a unique 3 stage "Spray-on"- "wash-off" anti-slip system process. The change created within the surface of the tile is invisible to the eye. Nothing is left on the surface at all. Floorsafe is **not** a sealer or a coating, in fact, after the Floorsafe application is completed, the surface actually looks unchanged which means that on going cleaning can be continued in the normal way. All three products are simultaneously applied one product on top of the other. The first product starts a cleaning process whilst at the very same time the second product creates the grip effect (the change). The third product acts as a rinsing aid when all three products are thoroughly rinsed from the surface with fresh water.

Although you cannot see it - you will definitely feel the difference.

EFFECTIVENESS PROVEN

Floorsafe International has been manufacturing its quality and proven anti-slip product for over 20 years. Australian Standard slip test results are available on request.

Floorsafe maintenance cleaners keep up the good work.

The Floorsafe Commercial Maintenance Cleaner (CMC) contains a balanced blend of quality surfactants and additives which allows it to do two operations at the very same time.

Specially formulated to be used in areas subjected to grease, fats and oils this very effective concentrated deep cleansing product also reconditions the anti-slip profile. Regular use will therefore ensure hygiene is maintained to a high standard and the effectiveness of the anti-slip is kept in premium condition.

The Floorsafe Domestic Maintenance Cleaner (DMC) contains special blended surfactants to remove soaps, bodyfats & oils found in bathrooms, shower bases and bathtubs. With its long lasting 'Heavenly' fragrance

this all-purpose concentrated disinfectant cleaner is a delight to use in the workplace and around the home.

Bath & Shower Safe provides added safety in the bathtub or shower for the young, the old and those with limited mobility.

Floorsafe Bath & Shower Safe product will provide a totally invisible grip effect to the complete base of a bath or shower. Simple to apply with no dry time, long lasting "Bath & Shower Safe" is more hygienic than a bathmat or stick-on tapes.

RECYCLED RUBBER SAFE FLOORING

Manufactured from recycled tyres, these soft attractive safety products are ideal for:

- Stairways
- Ramps
- Patios
- Gymnasiums
- Change Rooms
- Pool Areas
- Play Areas
- ✓ Stops noise

72 Tactile rubber stud pattern mat 300mm x 600mm. Available in black, yellow & grey.

Individual Studs

Coloured plastic - stainless steel and carborundum in-filled
Tactiles are R-12 rated for anti-slip safety. Provides a permanent solution for tactile guidance. Products are UV stable and meet all the required standards.

FLOORSAFE ADD-A-GRIP VINYL/TIMBER

ADD-A-GRIP Vinyl/Timber is developed and manufactured by Floorsafe International. ADD-A-GRIP Vinyl/Timber is a unique anti-slip liquid that you simply dilute with water or add to your cleaning bucket. After mopping the floor and allowing it to dry, a clear invisible slip resistant film remains - making floors safer to walk on. Re-applying the product will depend on surface type and the amount of traffic and wear. We recommend re-applying every 7-10 cleans.
Product sizes: 2 litre, 5 litre and 20 litre containers
Coverage rate: 1 litre of mixed product will do approximately 200-250 square metres of flooring.
