

The **SUMMIT 250**

Sliding Door "The Ultimate Door"

The Summit 250 Sliding Door is a product born out of necessity. Architects and Engineers working on projects in cyclonic regions of Australia require higher performing window and door products. The T1 building in Townsville Queensland by the Hedley Group, is an example of this requirement.

Structural .

Size & strength matters, sliding door heights above 3 metres are now possible with the Summit 250. Ultimate strength is obtained through the use of large interlocking hollow sections & heavier gauge wall sections throughout.

Aesthetics .

The Summit 250 inherits the similar features of the already successful Wintec Sliding Door such as; smooth lines, easy clean surfaces, end capped mullions & interlocks & a heavy duty roller system. The Summit 250 also allows the owner larger uninterrupted views.

Performance .

The Summit 250 is tested to AS 2047-1999 & can achieve wind load ratings above 8Kpa. Glazing options allow the Summit 250 to be used in sensitive acoustic & energy efficient applications where large openings & views are still a key requirement.

Additional Benefits .

The Summit 250 Door is suitable for all regions in Australia. It is particularly at home in high wind, coastal & cyclonic regions or for those who simply want "The Ultimate Door!"

● Summit 250

● Heavy Duty Double Bogie Roller System

● Rated in accordance with AS2047-1999
