Brilliant Gold sparkles on a luxurious blue-violet tapestry as wide as the summer sky.

Fascinating Worlds

Throughout history, mankind has had an enduring appreciation of colour. From the discovery of organic purple dyes before 1900 B.C to the development of colour TV and movies after 1900 A.D, the world we live in is saturated in colour. Colour conveys emotion, it inspires and motivates. And now... colour has evolved.

ALUCOBOND® spectra colours celebrate the natural colour shifts that occur in materials that affect everyday life: The subtle nuances and colour contrasts found readily in nature, the glowing luster and sheen in modern metals and the colour shifts found in today's luxury goods. Colour adds fascination to the world, **ALUCOBOND® spectra colours** add fascination to architectural design.

Fascinating Surfaces

ALUCOBOND® spectra colours operate on the same principals as natural colour shifting surfaces. Depending upon the pigment type and viewing angle, different wavelengths of light are reflected back to the audience resulting in an ever-changing colour gradient with iridescent highlights. With **ALUCOBOND® spectra colours**, architects can create a truly memorable experience that will fascinate the audience and provide a lasting personal impression. The use of high-quality Fluorocarbon paint systems applied in a continuous coil-coating process ensures that the original design isn't compromised.

Remark

ALUCOBOND® spectra colours can be applied on **ALUCOBOND®**, **ALUCOBOND® plus** and **ALUCOBOND® A2**. Minimum order quantity applies. For details and available specification please refer to the manufacturer or your nearest **ALUCOBOND®** representative. To avoid possible reflection differences, it is recommended to install the panels in the same direction as marked on the protective peel-off-foil. Colour variations may occur between panels originating from different production batches. To ensure colour consistency, the total requirement for a project must be placed in one order.

- Continuous colour shift over whole colour SPECTRUM (from colour 1 to colour 2)
- Irrespective of the viewing angle
- Your eyes see various colours
