

Introducing the touchless Geberit Sigma80

AN electronic plate that operates with the wave of your hand.

The glass actuator plate has ingenious sensors that respond to motion. By simply waving in front of the full or half light field, you can activate the flushing mechanism. You also have a choice of different colour settings for the button lights. Adapting the light fields to the interior design concept is simple and versatile. Additional operating parameters and settings – such as activating automatic flushes if the toilet is not being used for an extended period – can be programmed too.

The Sigma80 has won numerous awards such as: IF Product Design Award 2012, Interior Innovation Award, Reddot Design Award 2012 and Plus X Award.
