

Fire! Fire!

Fire retardant timber panels

► So you want timber panels, but you don't want to risk the whole place going up like a tinderbox? Fear no more: the Supawood range of decorative and acoustic wall and ceiling panels are now available in a fire-retardant version: Supawood FR.

Despite more stringent BCA fire-hazard regulations, Supawood FR panels still meet all requirements for any Group number (1,2 or 3) and for any interior area, within any class of building where conventional panelling could not previously be used. In meeting Group 1 requirements, Supawood FR panels are deemed the least combustible timber product and therefore can be used in all critical areas where timber panels could not previously be used such as fire-isolated exits, lift car interiors, public corridors and lobbies providing fire egress. The panels can also be used in un-sprinklered accommodation in aged care or health-care buildings, atriums,

open plan offices, theatres, auditoriums, halls or schools.

Low in formaldehyde and certified with FSC chain of custody, Supawood FR achieves credit points for all Greenstar projects.

As super as the name suggests! Now you can add some creativity to a foyer or bring a dull room to life, safe in the knowledge that it's fire resistant as well. Supawood FR is available and compliant in all product types - Supaline, Supacoustic and Supaslat - and all standard finishes: natural timber veneer, concept veneers, paint colours and flame retardant fabrics. Ask for the relevant certificates today! Supawood FR puts safety first while still retaining a decorative finish: peace of mind you can see.

From start to finish, specification to installation, Supawood are involved in all aspects of your project.

From start ... to finish
