The World First Innovative Fitting Technology

Reno **TRANSFORMER** Technology

Australian Patented

The Only way to Convert Two Handles to a Single Mixer

"No need of knocking down wall at all"

The patented fitting enables the water flow to be blocked off existing passage and to be diverted to a new spout.

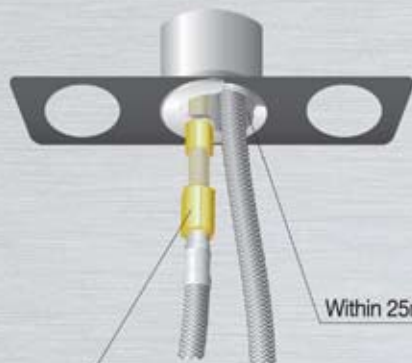

It gives size flexibility

It allows easy installation under any circumstances

For Other Taps
Need 34mm or bigger hole

Within 25mm

Transforming

Removed one direct connection of the 2 flexible hoses from tap body, to enable all connections to fit into a small hole. Instead, made a water passage through the tap holder fitting and connected the removed flexible hose to it.

This amazing tap fitting and hole-cover caps enable you to convert two handles tap into a single mixer instantly at a minimum cost.
