

## Greening Our Surroundings

► In the past office refurbishment was largely about aesthetics. More recently there has been an increasing demand for 'green' options including sustainable timbers managed by the Forest Stewardship Council (FSC). The Supawood 'Green' environmentally-friendly range of products is the key for all refurbishment upgrades which require compliance with recent Green Building Council of Australia (GBCA) benchmarks.

Supawood's 'Green' Panels feature medium density fibreboards with low formaldehyde emissions (E0 or E1) made from FSC certified plantation grown timber, along with finishes having low volatile organic compounds (VOC's), thus meeting the requirements of Green Star projects.

The natural warmth of most natural timber veneers can be further enhanced with the application of Supafinish Natural, a heat-applied VOC-free clear finish, which requires no solvent in its application and retains the natural character of the timber surface without the conventional wetlook.

Supawood 'Green' panels available in the complete Supawood product line can earn extra Green Star credits for additional features such as for demountability.
