Next Generation of Electronic Tapware

THE new Enmatic range from Enware-Oras combines advanced technology with Nordic design and engineering to deliver what we believe to be the most advanced electronic taps in the Australian market.

Technology improvements can be seen in the infra-red sensor. The auto-focus beam incorporates triangulation technology from Enware-Oras, which means a more reliable operation and less interference from reflective surfaces, as well as additional user friendliness with the incorporation of Intelligent Activation Technology.

Another new feature is the optional temperature adjuster, making Enmatic a more practical solution for bathrooms and it is fast

becoming a must in modern European homes. This control feature gives the ability to wash your hands with warm water or brush your teeth with cold water, all with the luxury and hygiene of hands-free operation, and the water saving benefit of automatic shut-off.

The range is WaterMark approved, with an impressive 6 Star WELS rating for water efficiency, and mains or battery powered options. The internals are IP67 rated for water and humidity protection of electrical components. It also has dual fixing points for extra strength in public washrooms. There are three models introduced so far: Cubista, a designer model; Viva, easy clean robust design; and the Nova, the single temperature basic model.
