# CASE STUDY: Waverley Public School

## Background

Waverley Public School is a kindergarten to year six public school, located in the heart of Sydney's Eastern Suburbs, with a current enrolment of approximately 330 students.

The head of after school care had noticed a need for additional bubblers to be installed, due to the increased number of students attending before and after school care.

The school principle raised concern, that they did not have enough bubblers located near the school care building, and wanted to upgrade the existing stainless steel bubblers and troughs in the playground area of the school.

## Enware's Solution

Enware's Blueline Bubbler Range offers design flexibility with a choice of six different models to suit trough, post or freestanding applications as well as bubbler only or bubbler/bottle filler combination.

The Enware team conducted a site visit at Waverley Public School, to check measurements and space to ensure the Blueline Range would suit both, new and existing replacement troughs.

Initially the team removed the ten year old existing Enware bubblers that Waverley Public had on an existing trough and replaced them with the new Blueline Bubblers.

The team made sure that the existing trough was the correct dimensions for the new tapware, test and commission. If needed they were able to make alterations and customise the trough to existing plumbing to suit the new units.

Once the upgrade had been completed the additional 18 bubblers were installed, bringing the total number of bubblers to 27 within the school playgrounds.

### Products used

- BUB224NC - BLUELINE TYPE 63 ANGLED BUBBLER FOR WALLSEND TROUGH INSTALLATION WITH RUBBER GUARD AND OPTIONAL BOTTLE FILLER
- CUSTOM MADE BRITEX STAINLESS STEEL DRINKING TROUGHS

## The Results

Drinking water is very important for optimal physical and mental activity.

The teachers and students were all delighted with the new bubblers installed, and had a lot of fun testing them out.

By enabling students to have a drink of water while they are at school and participating in outdoor activities, Enware's Blueline Range is helping school children stay hydrated all day long.

The key features of Enware's Blueline Bubblers include a bright blue soft rubber mouthpiece with UV and bacteria resistant properties to protect children's teeth and increase product life, gentle, tactile and high contrast lever with easy to interpret function in braille and written word; simple operation for drinking, tough construction to endure the high wear and weather demands of outdoor environments.

### Key features

- Easy to turn handle features directional arrows and braille instruction
- Bright tactile rubber handle grip and turn paddle with balance point handle for ease of use
- Bright coloured soft mouth guard protects teeth, gums and lips from accidental damage
- Integrated flow control ensures flow is the right height every time with integral non-return valve to protect the water supply
- Anti-rotation wall cover flange
