

Case Study

APA Group Perth Office

Context

APA Group is Australia's leading gas transportation company with interests in over 15,000 km of natural gas pipeline infrastructure across Australia, including wind farms, gas-fired power generation and gas storage facilities.

APA Group's movement towards a smarter workplace experience for staff, included several leading smart building technologies. One of the significant components of the workplace experience are the staff lockers.

Solution

APA Group required several technology driven system requirements. The key elements included:

- Electronic locking mechanisms for each locker, with mobile enabled HID access control readers.
- Cloud-based software locker management system to manage communication to each locking mechanism.
- Multiple locker reservation types - Allocated, Temporary, Shared.
- Integration with tenancy access control, and security access cards. User Import via API or CSV file.

Yellowbox met all Solution Design, Hardware, Software, System Integration and Network Interface requirements of the project tender. The system has provided a seamless experience for staff, fit for today's dynamic work environment.
